Cognitive biases

Risks we have experience with: everyday mortality

***“You won't skid if you
stay in a rut.”***

-Kin Hubbard

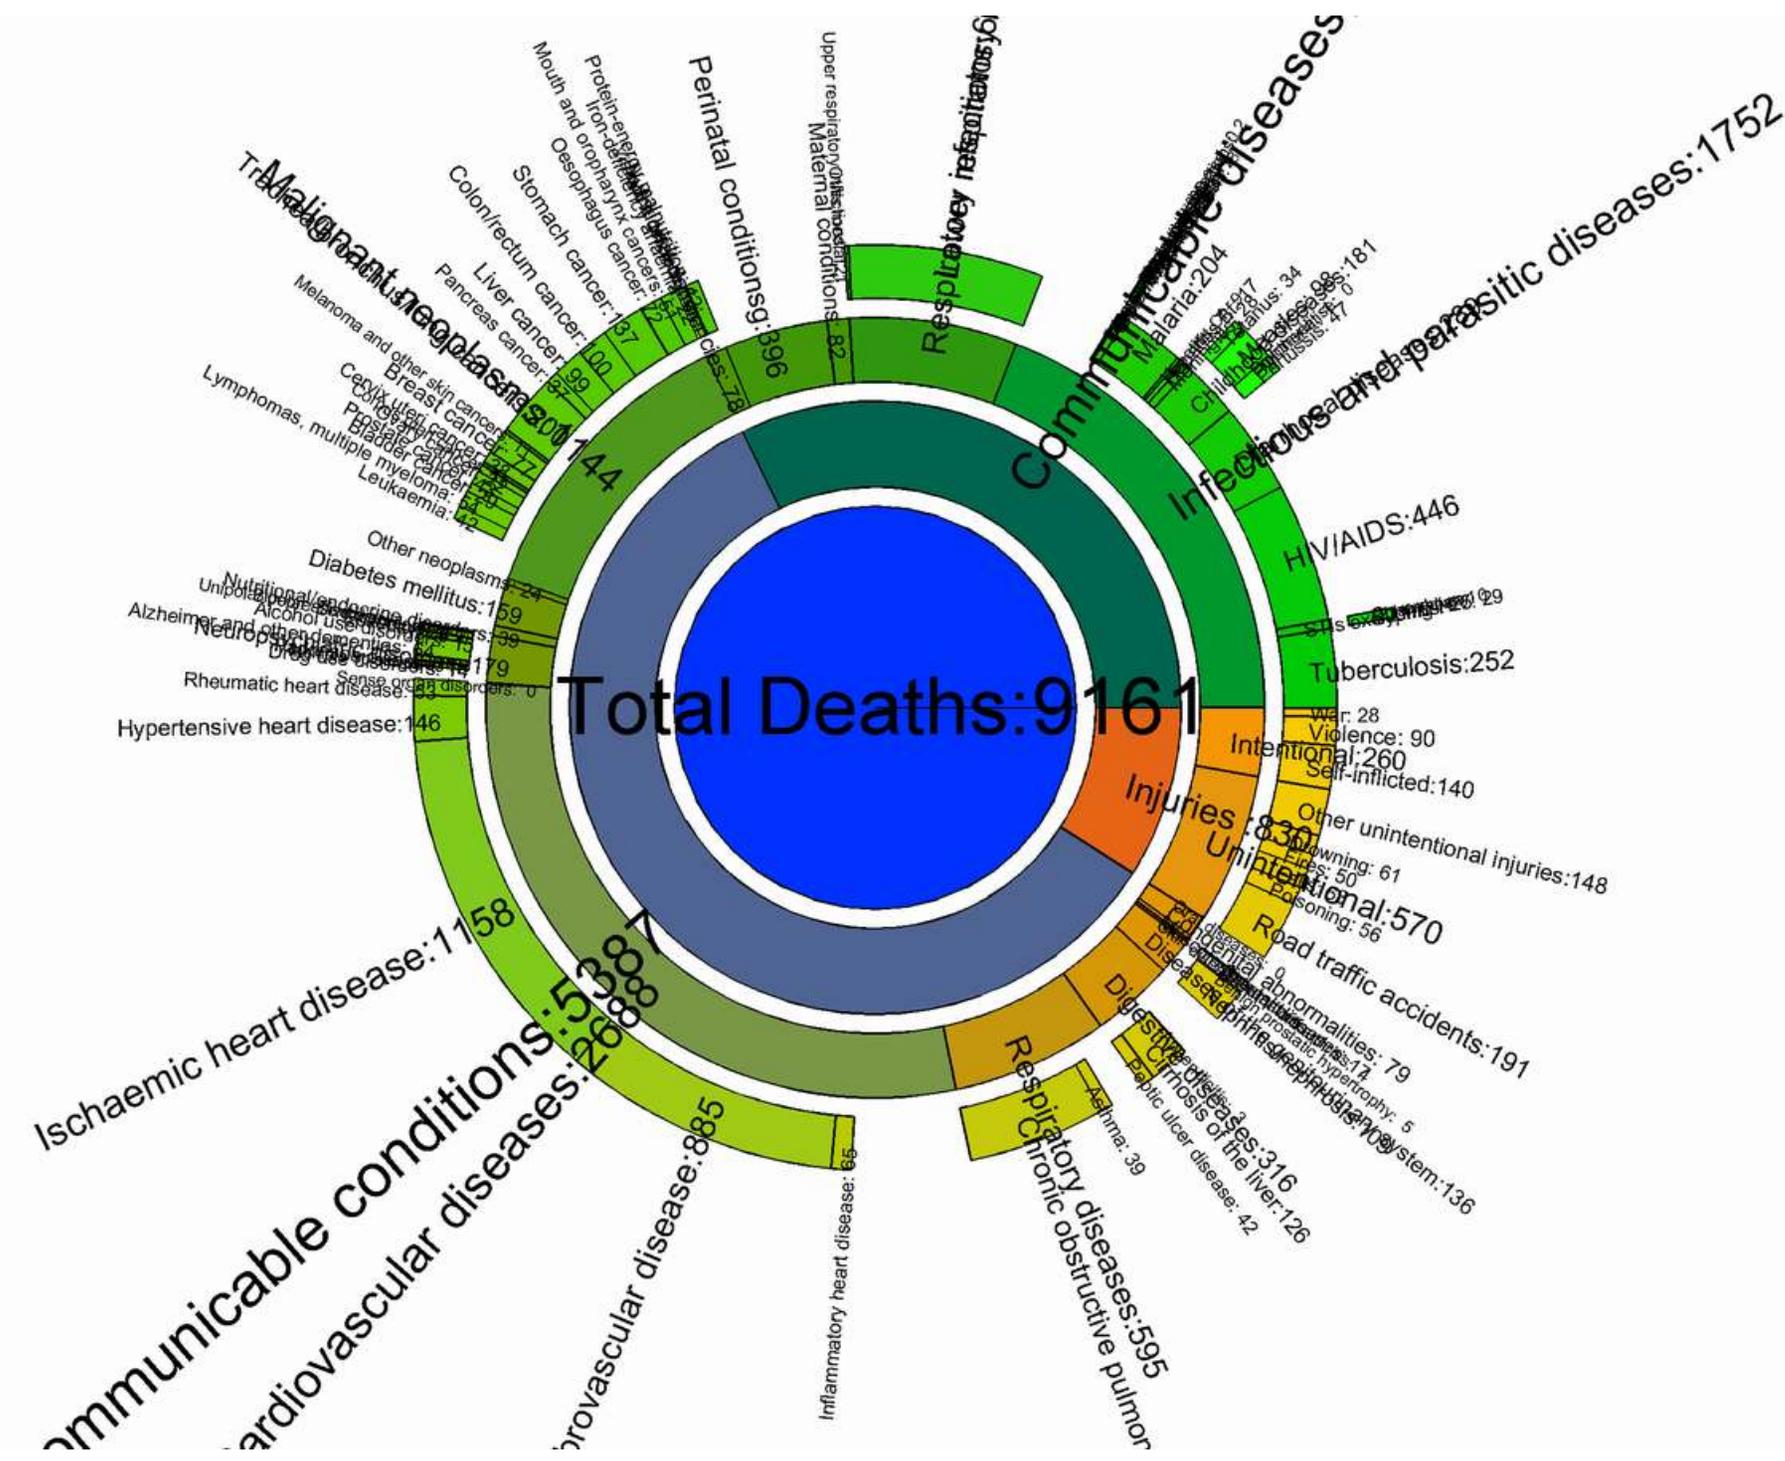

Micromorts

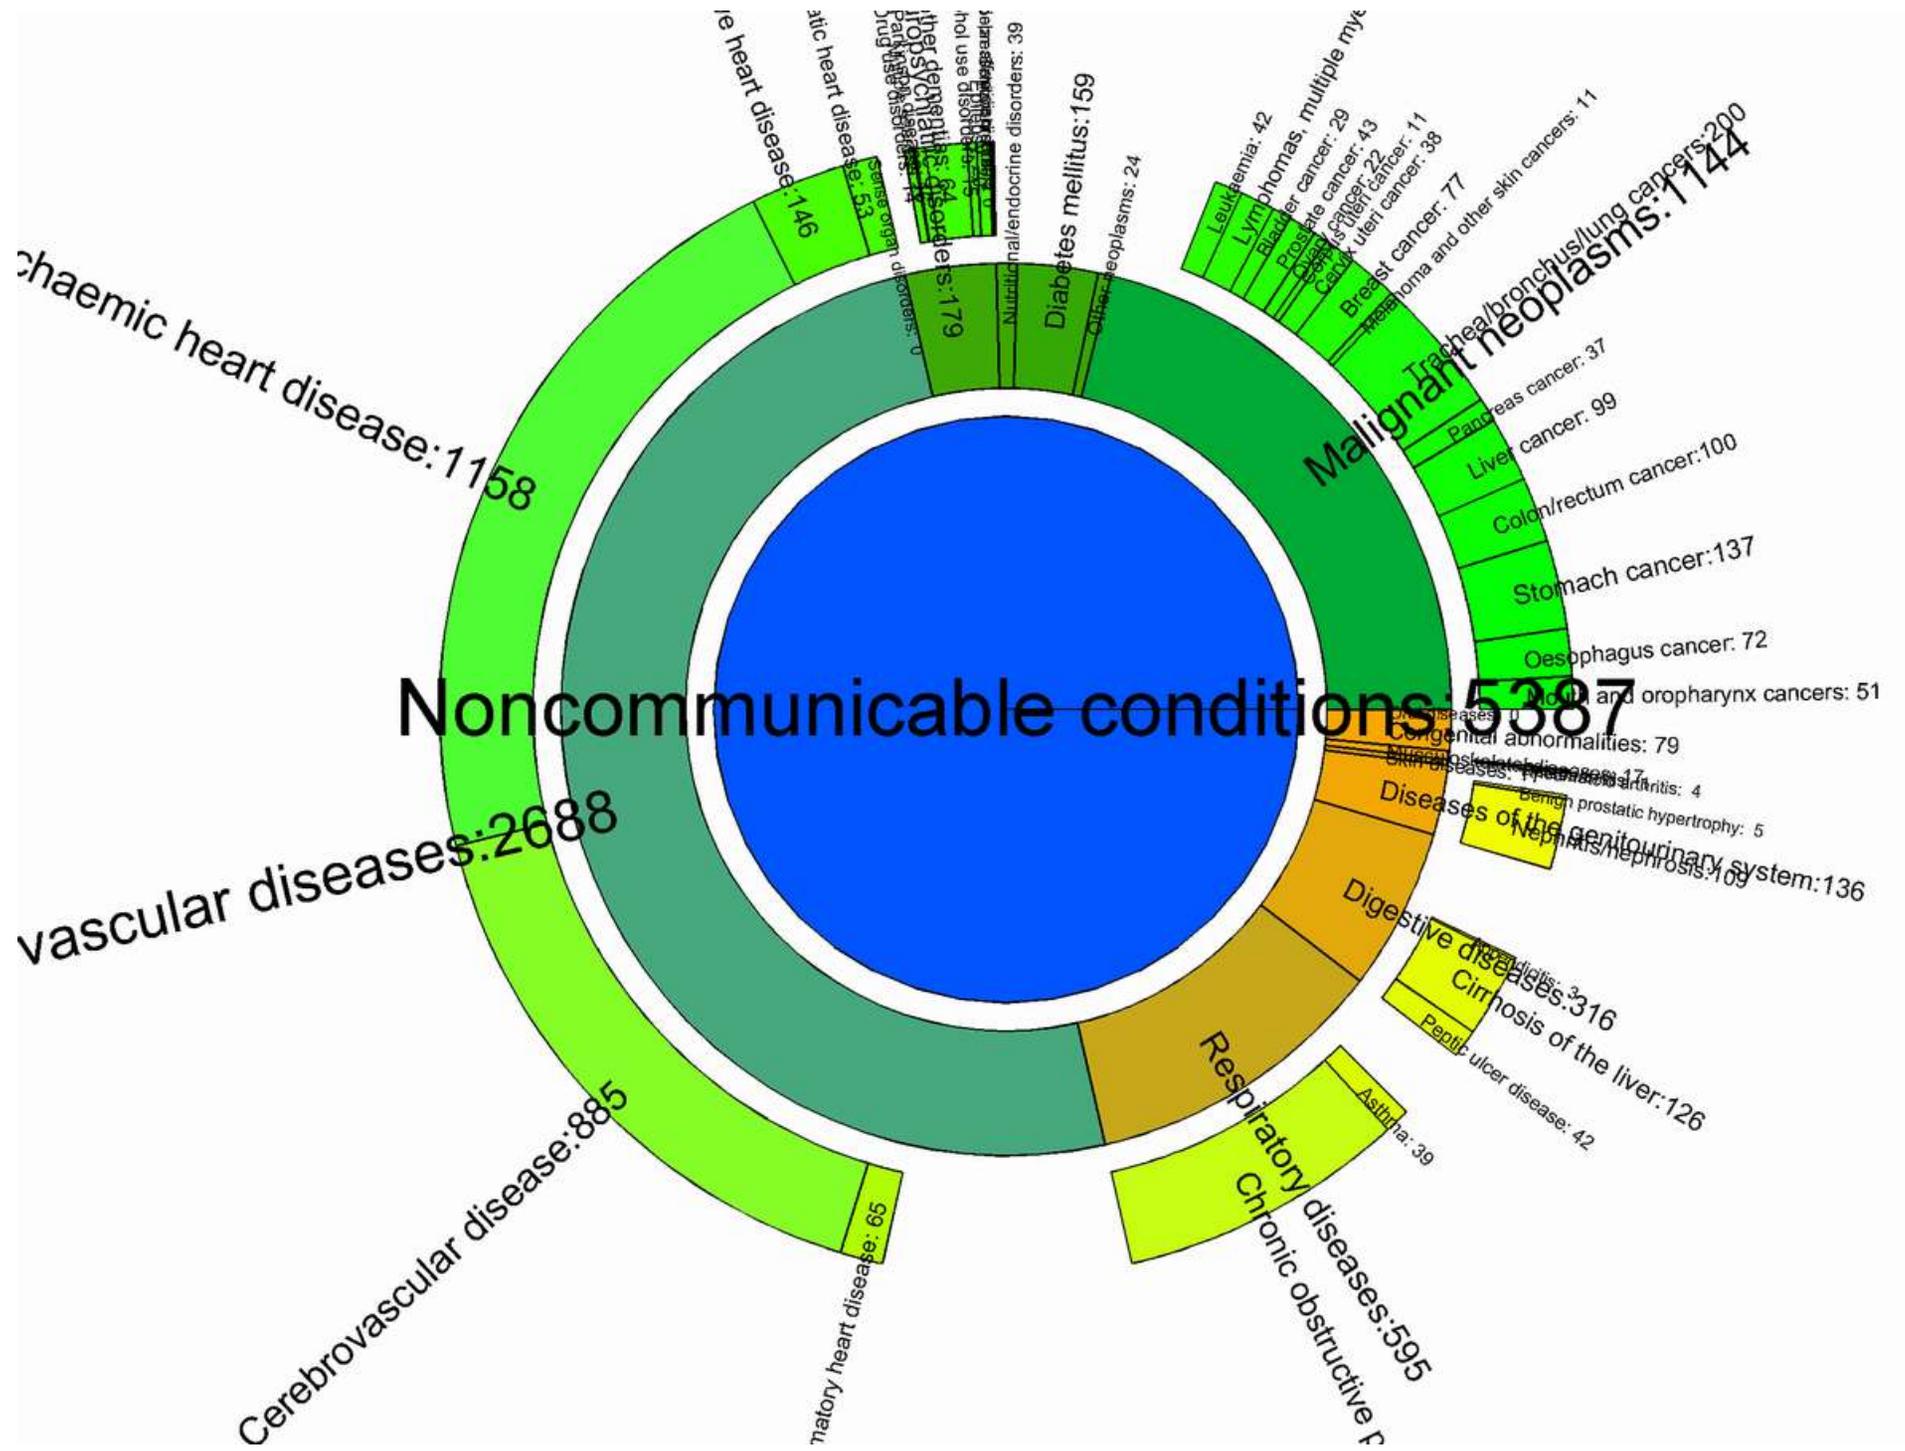

1 micromort = one-in-a-million probability of death

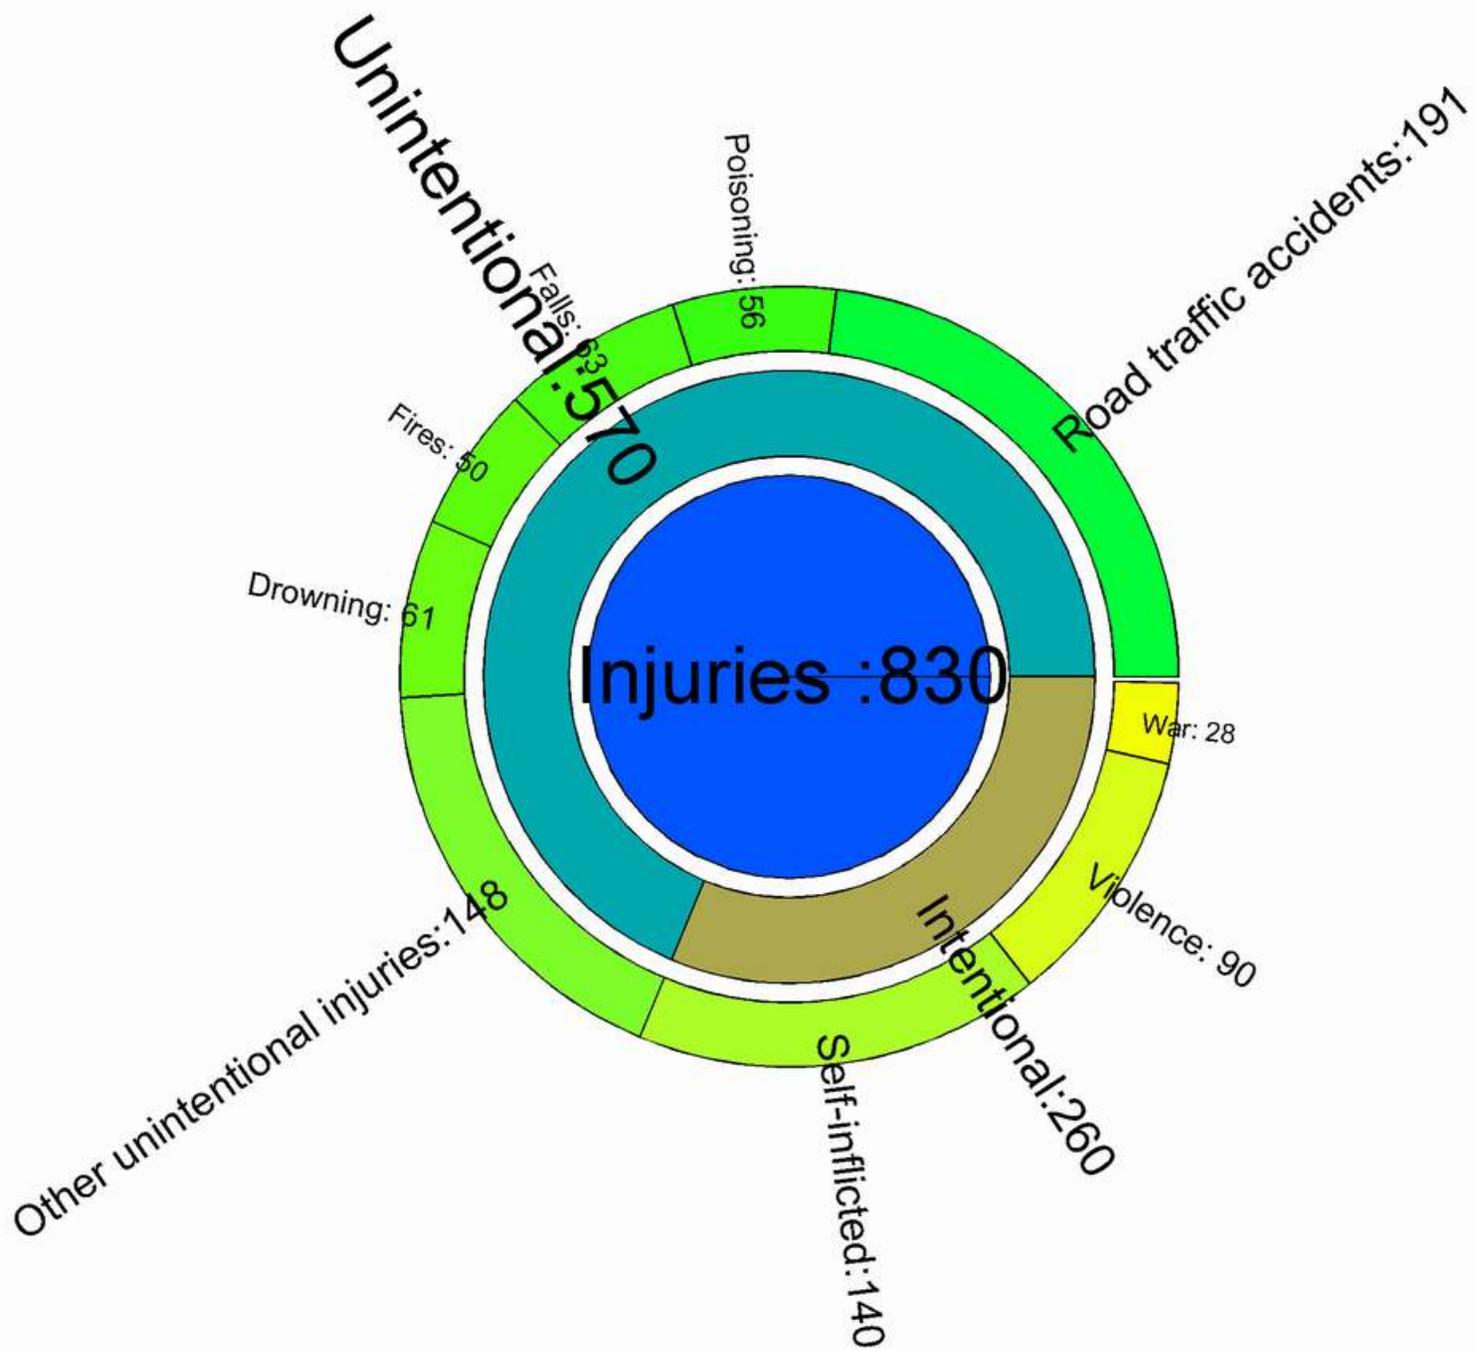

- Suggested by Ronald A. Howard***
- Good for rough comparisons***
- People usually pay between \$4 and \$20 to reduce risk one micromort***
- Accident risk: ~1 mmt/day***
- Mortality: grows approximately by 10% per year from 100 mmtly at age 10***
 - Mortality rate for a 37 year old male is ~3.4 micromorts per day.***

Noncommunicable conditions: 5387

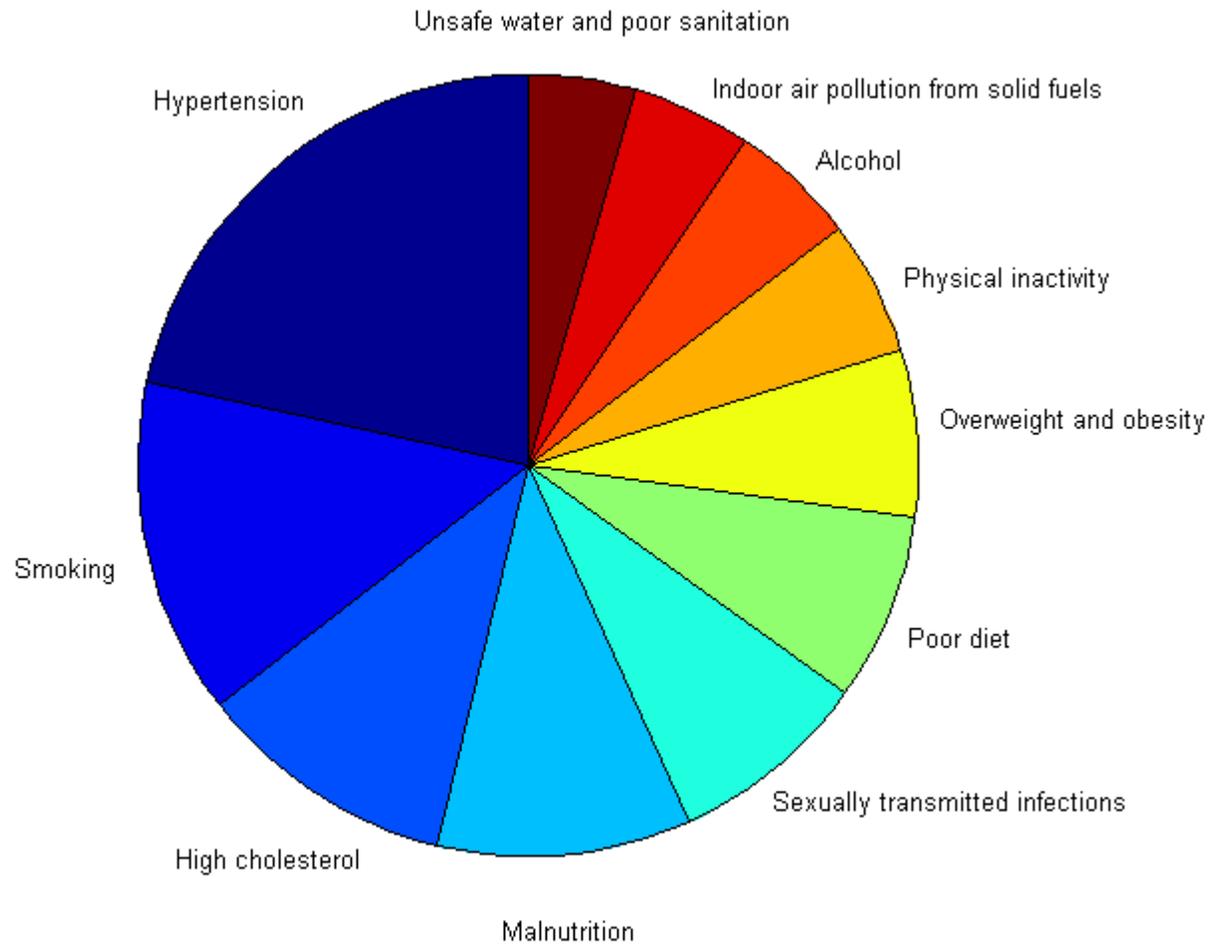

1 micromort risks

- **Smoking 1.4 cigarettes**
 - (cancer, heart disease)
- **Drinking 0.5 liter of wine**
 - (cirrhosis)
- **Spending 3 hours in a coal mine**
 - (lung disease)
- **Spending 3 hours in a coal mine**
 - (accident)
- **Living 2 days in New York or Boston**
 - (air pollution)
- **Living 2 months with a smoker**
 - (cancer, heart disease)
- **Drinking Miami water for 1 year**
 - (cancer from chloroform)
- **Travelling 6 minutes by canoe**
 - (accident)
- **Travelling 10 miles by bicycle**
 - (accident)
- **Travelling 230 miles by car**
 - (accident)
- **Flying 1000 miles by jet**
 - (accident)
- **Flying 6000 miles by jet**
 - (cancer from cosmic radiation)
- **Travelling 6000 miles by train**
 - (accident)
- **Living 2 months in Denver**
 - (cancer from cosmic radiation)
- **One chest X-ray**
 - (cancer)
- **Living 150 years within 20 miles of nuclear power plant**
 - (cancer from radiation)
- **Eating 100 charcoal-broiled steaks**
 - (cancer from benzopyrene)
- **Eating 40 tablespoons of peanut butter**
 - (liver cancer from aflatoxin B)
- **Taking one ecstasy tablet**
- **Making 2 riding trips**
- **1/8 hang-gliding trip**
- **1/5 scuba trip**

Micromorts per year (US)

- ***All causes, age 80: 80000***
- ***Heart disease: 2519***
- ***Stroke: 589***
- ***Unintentional injury: 340***
- ***Cancer: 195***
- ***Car accident: 148***
- ***Leukaemia: 76***
- ***Homicide: 64.8***
- ***Accidental poisoning: 35***
- ***Food poisoning: 17.7***
- ***Drowning: 15.6***
- ***Fire: 12.1***
- ***Killed by co-worker: 9***
- ***Tuberculosis: 5***
- ***Train accident: 2***
- ***Electrocution: 1.5***
- ***Airplane accident: 0.9***
- ***Asteroid impact: 0.76***
- ***Floods: 0.4***
- ***Terrorism: 0.3***
- ***Lightening: 0.2***
- ***Insect sting: 0.2***
- ***Earthquake: 0.1***
- ***Train crash: 0.09***
- ***Struck by fallen airplane: 0.06***
- ***Hurricane: 0.04***
- ***Bioterrorism: 0.018***
- ***Fireworks accident 0.01***

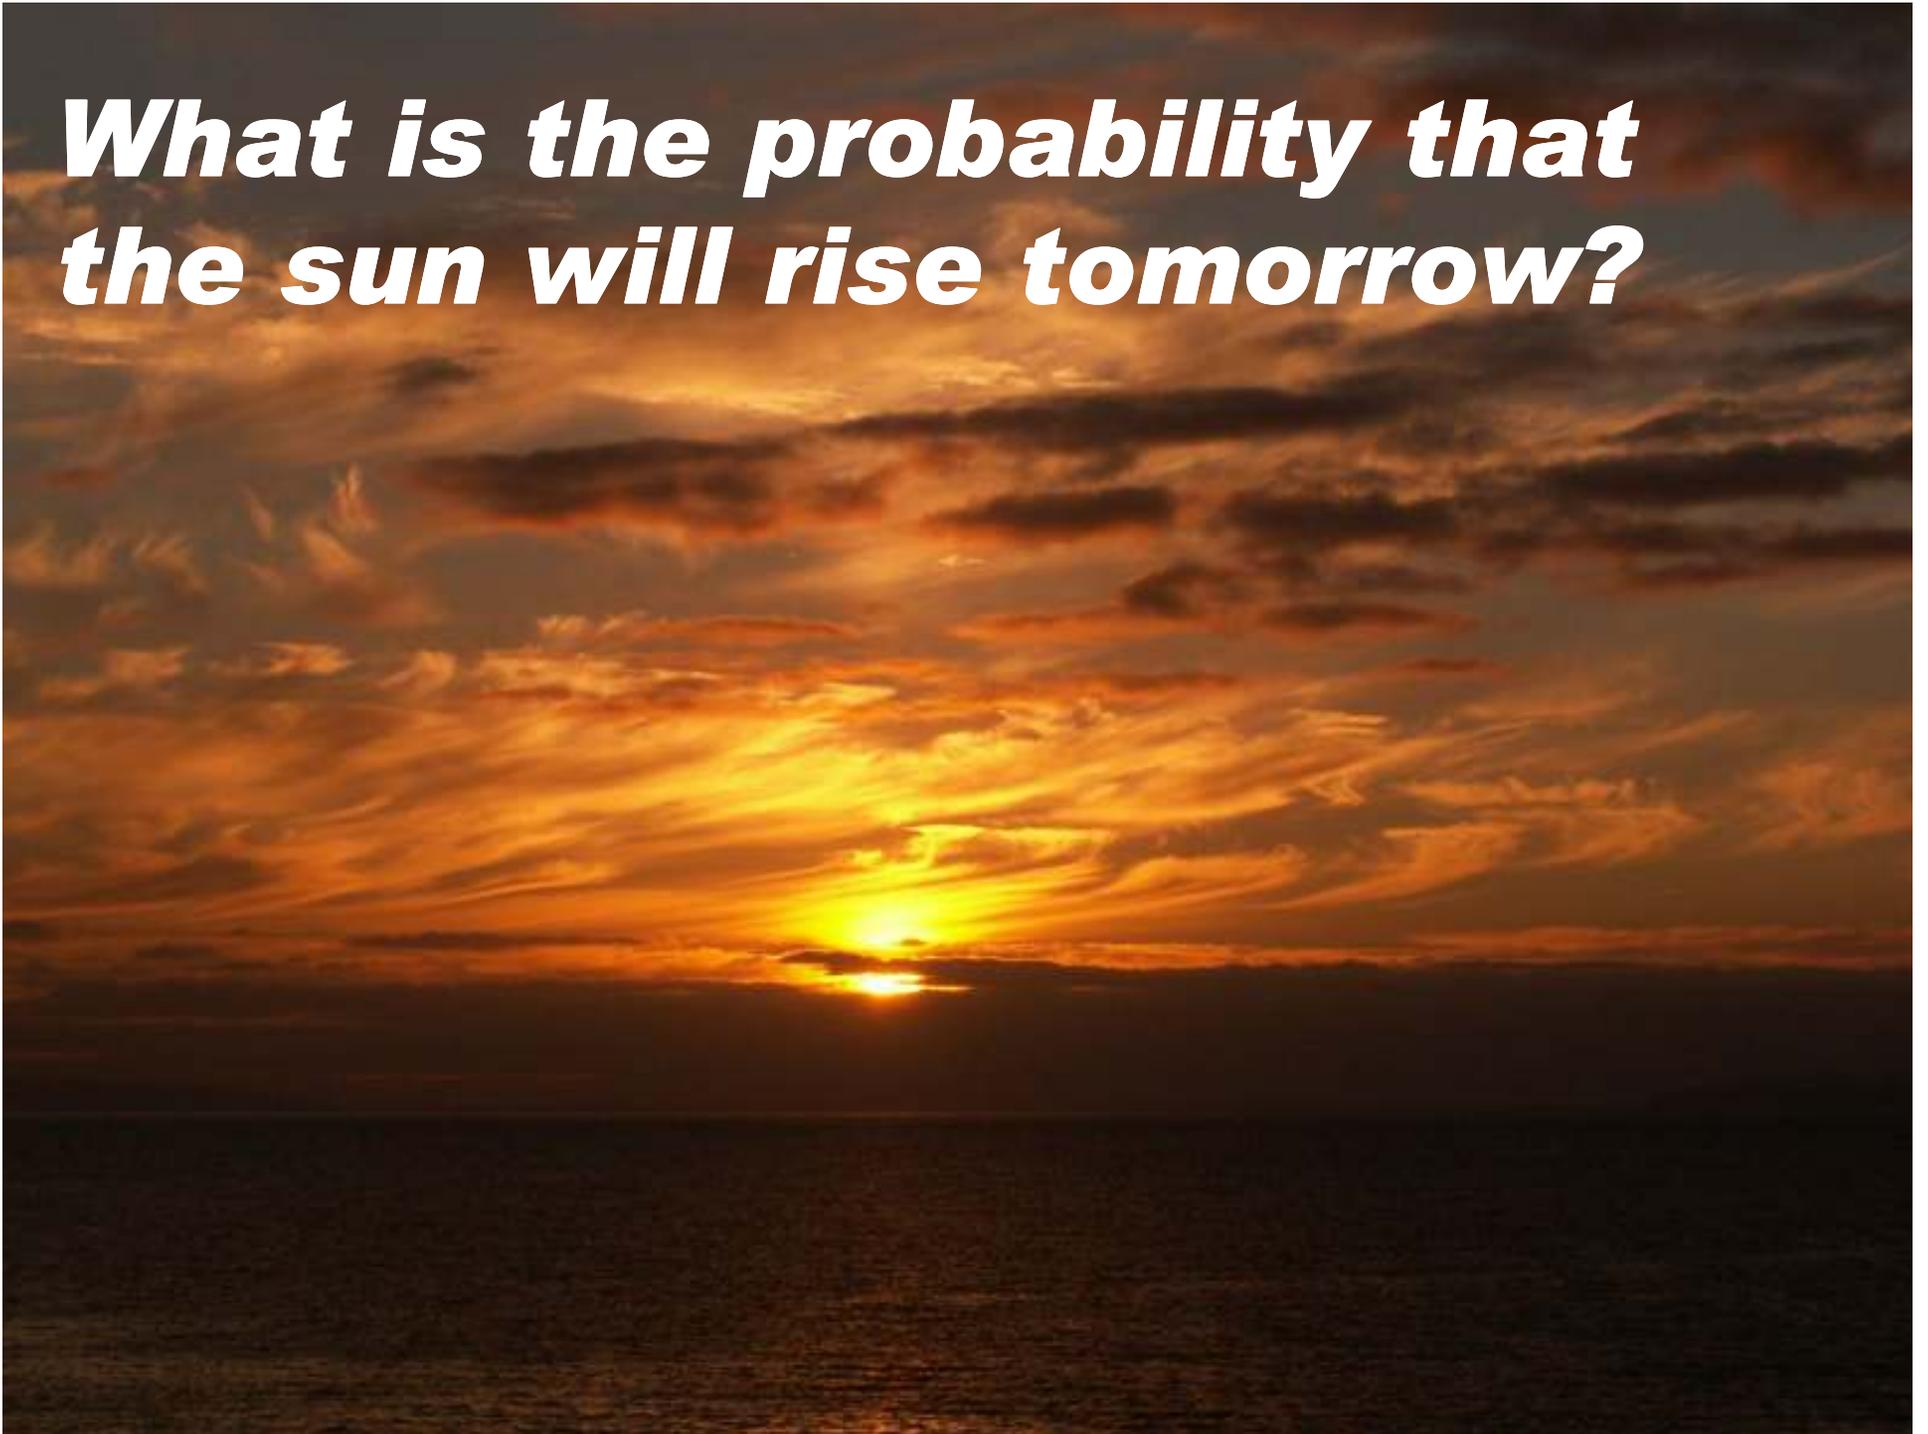

Risks we almost have experience with: swine flu

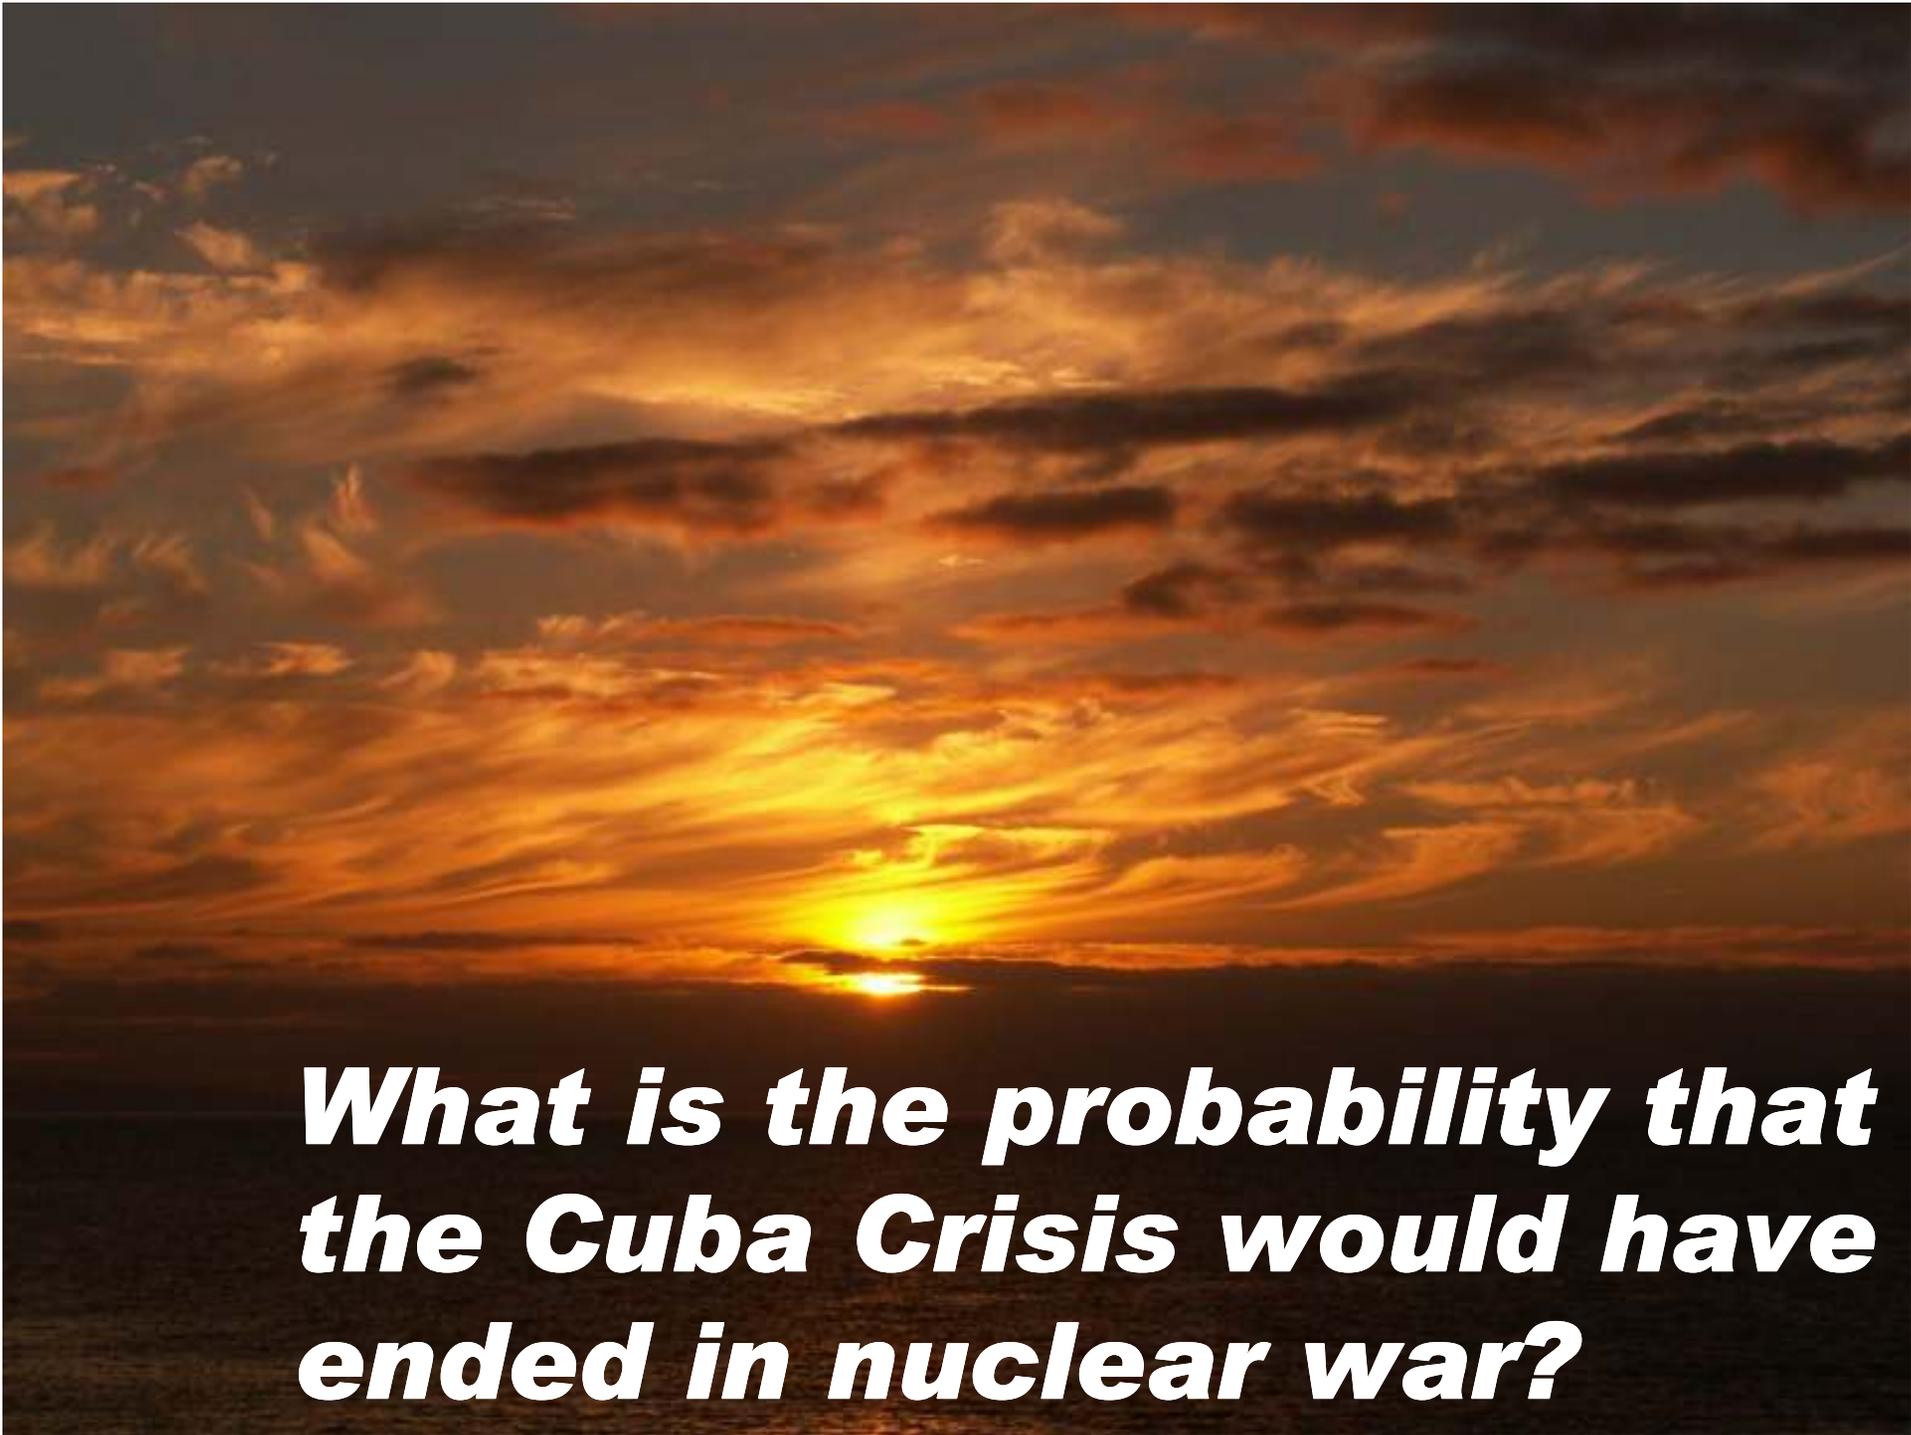

How bad could it be?

***The Doctor: “Think
how bad things could
possibly be, then add
another suitcase of
bad.”***

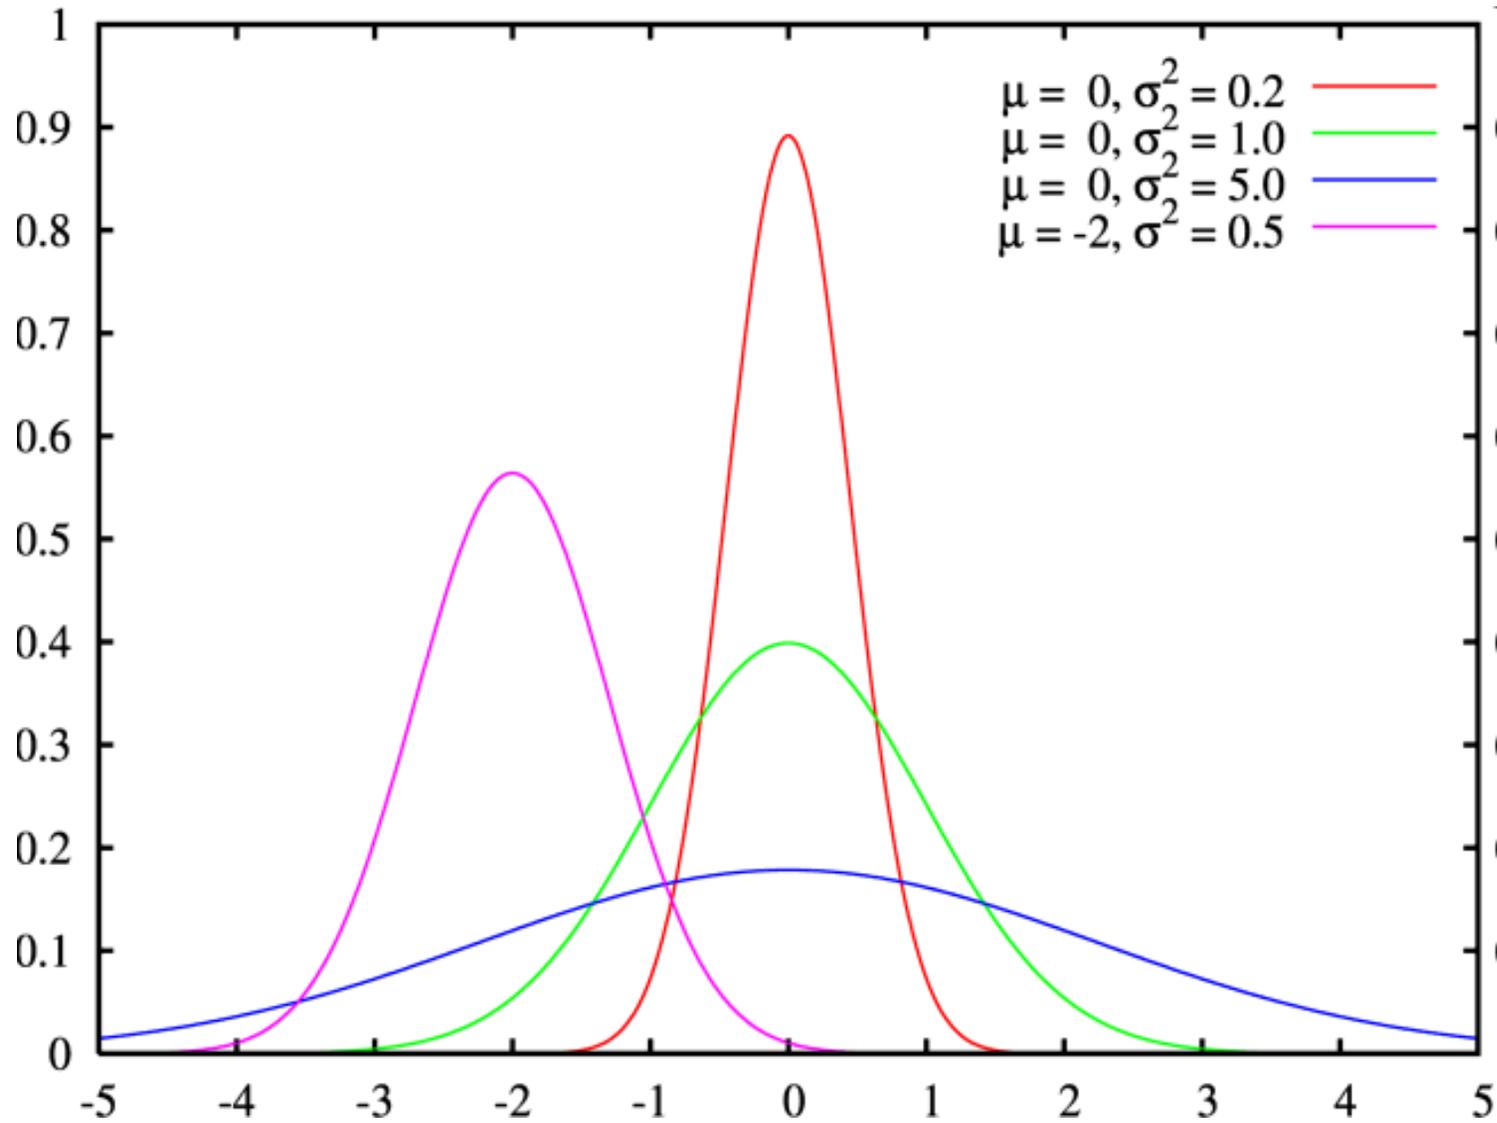

***What is the probability that
the sun will rise tomorrow?***

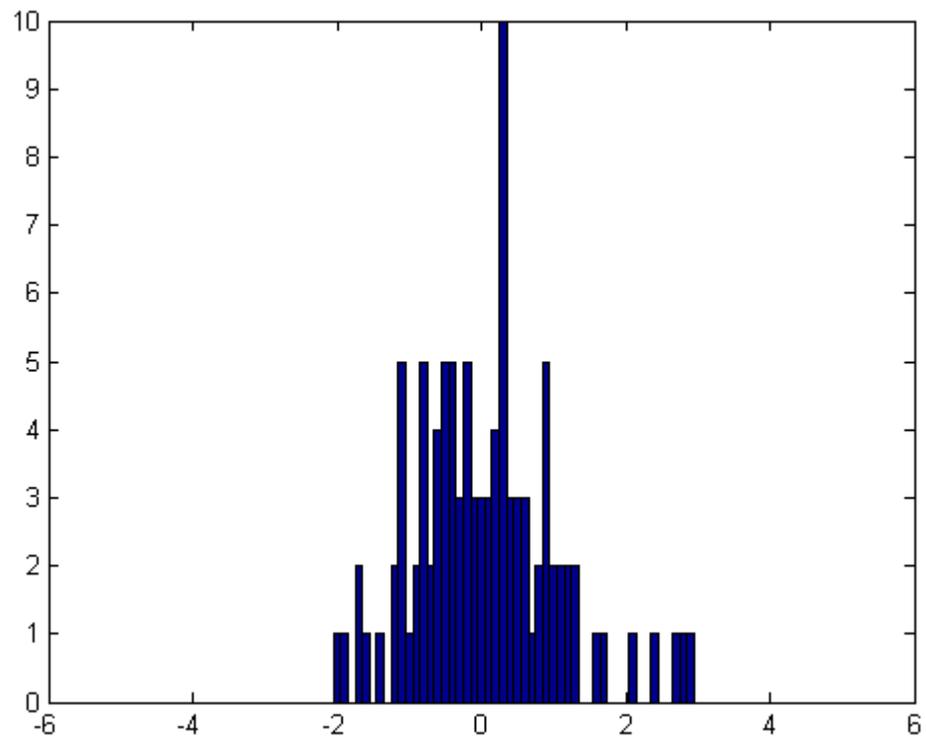

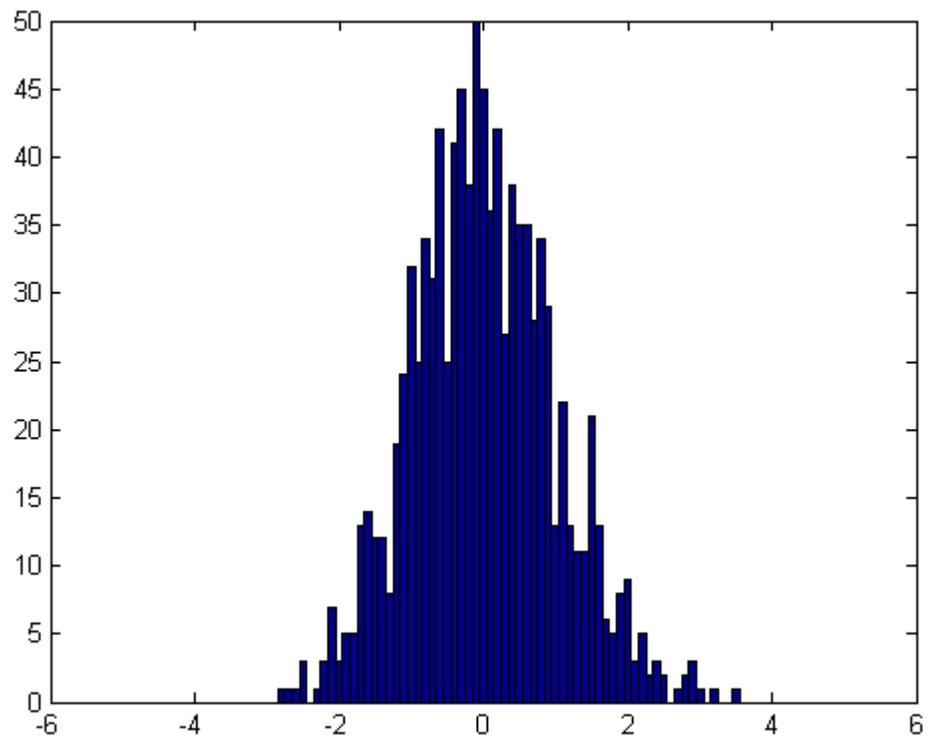

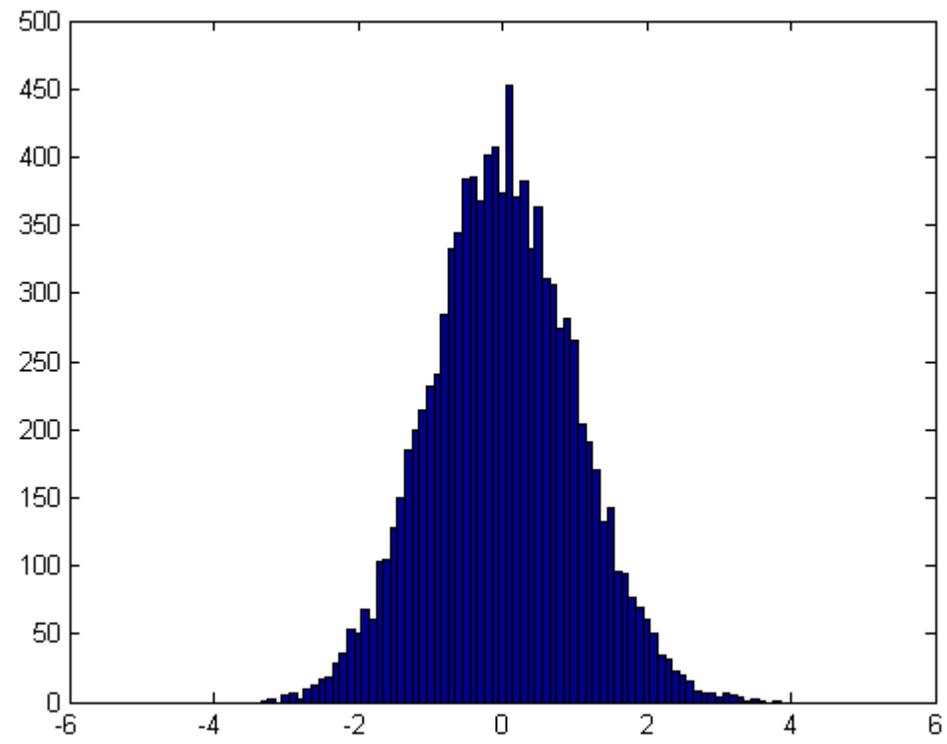

What is the probability that the Cuba Crisis would have ended in nuclear war?

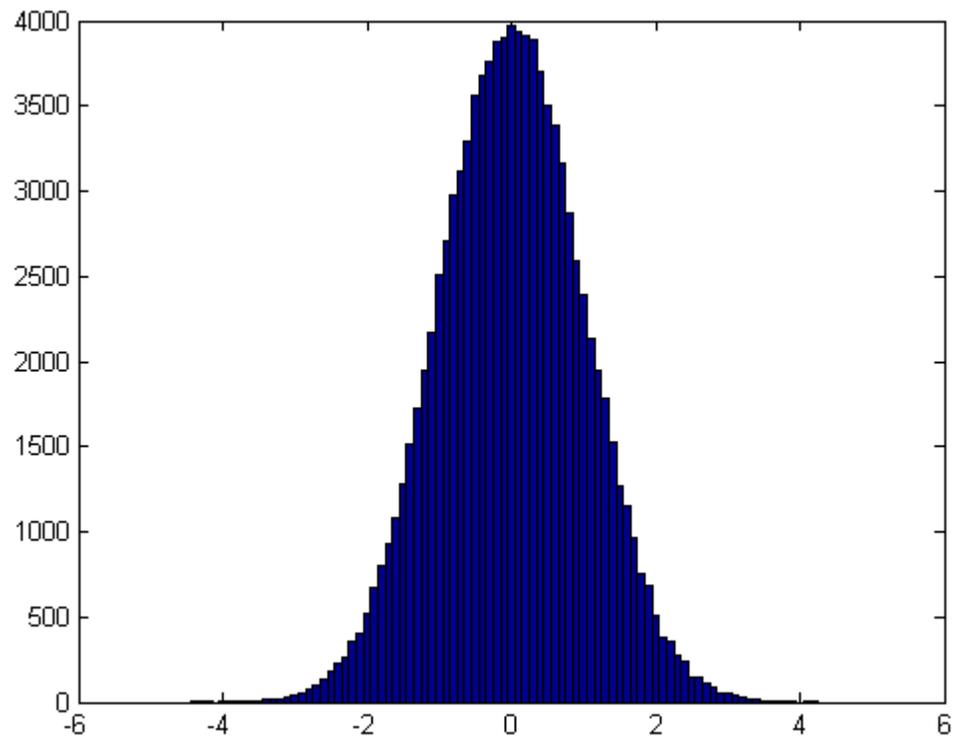

$$p(x) = \frac{1}{\sigma\sqrt{2\pi}} \exp\left(-\frac{(x-\mu)^2}{2\sigma^2}\right)$$

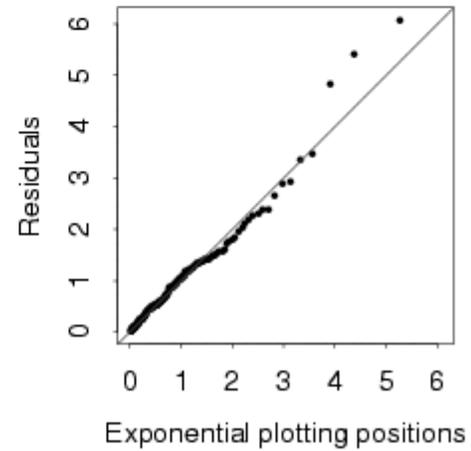

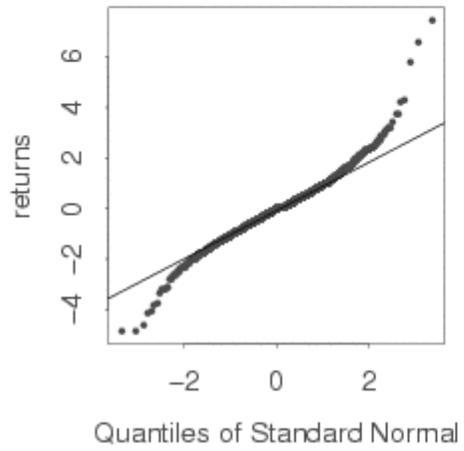

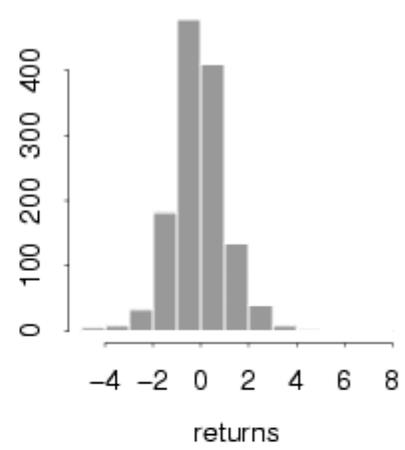

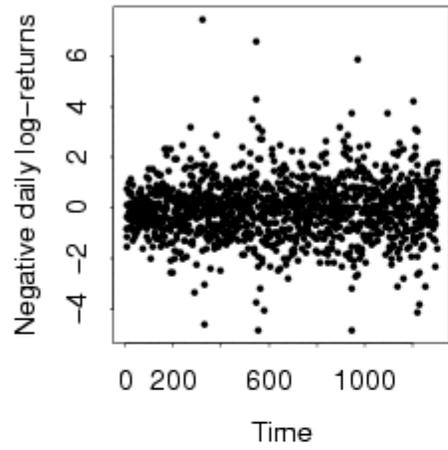

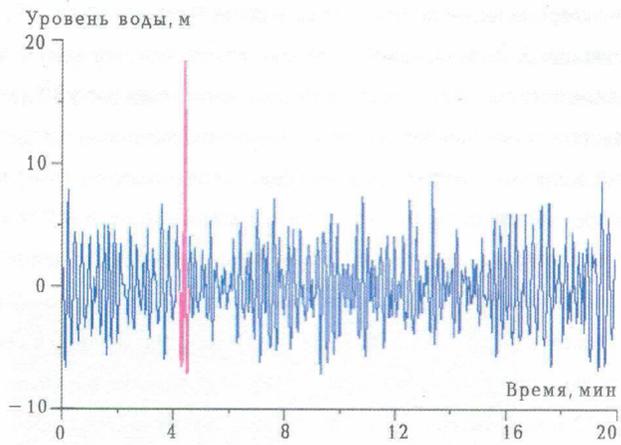

Рис. 1.9. «Новогодняя волна», зарегистрированная в Северном море 1 января 1995 г. [106]

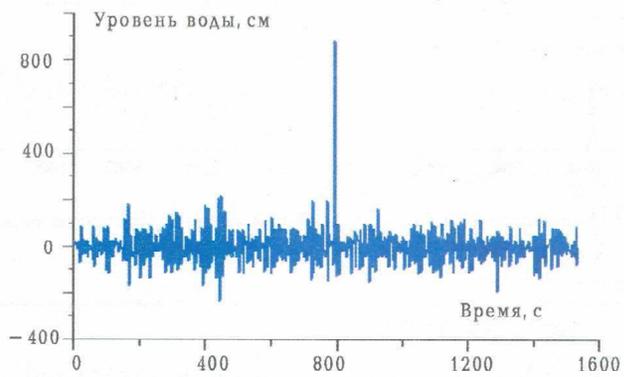

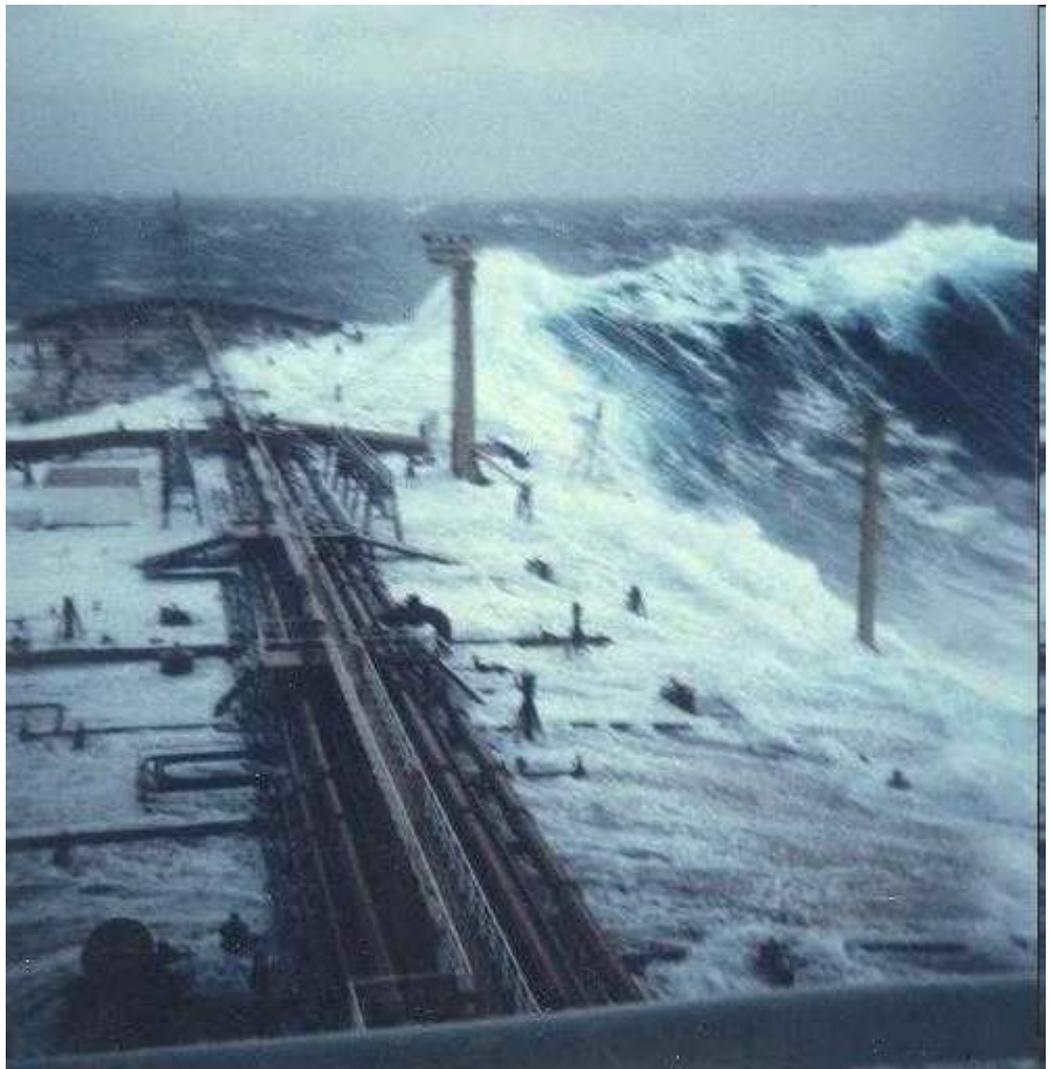

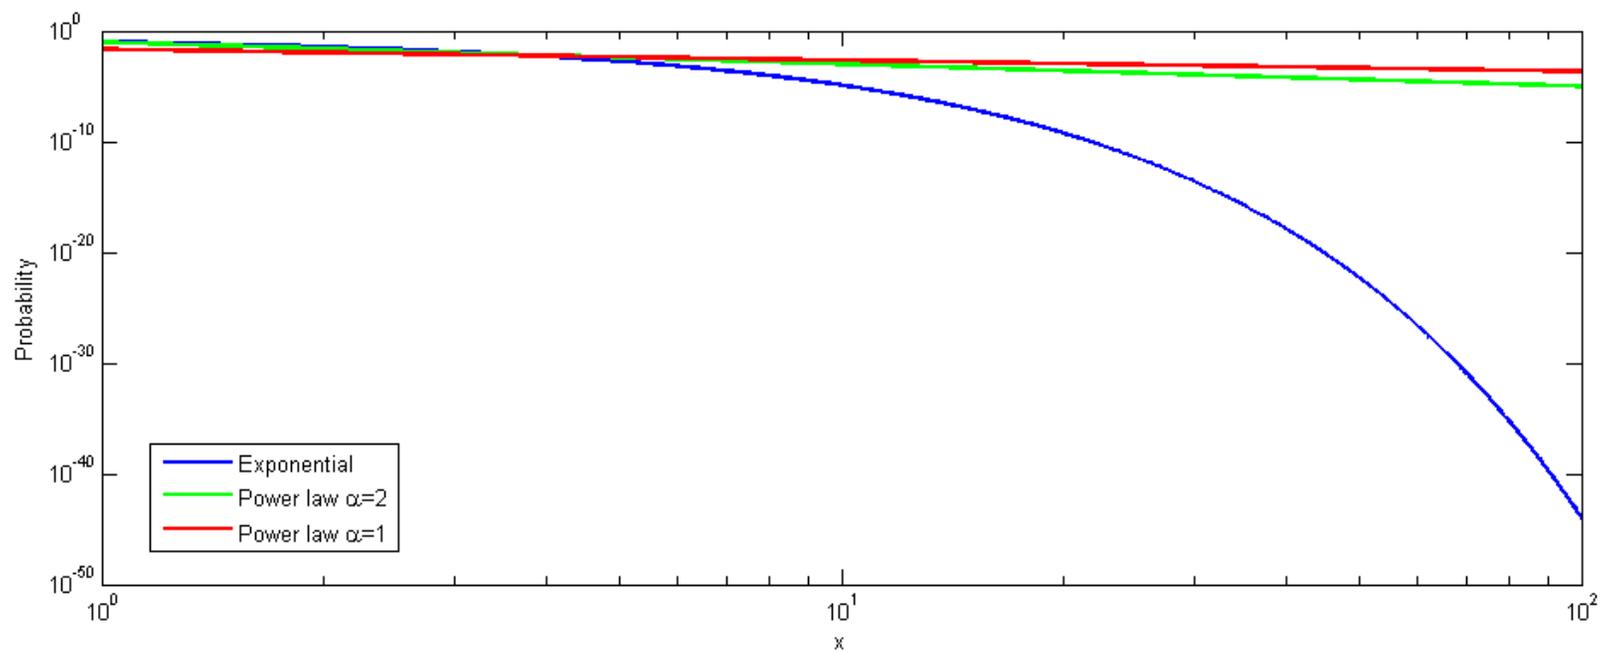

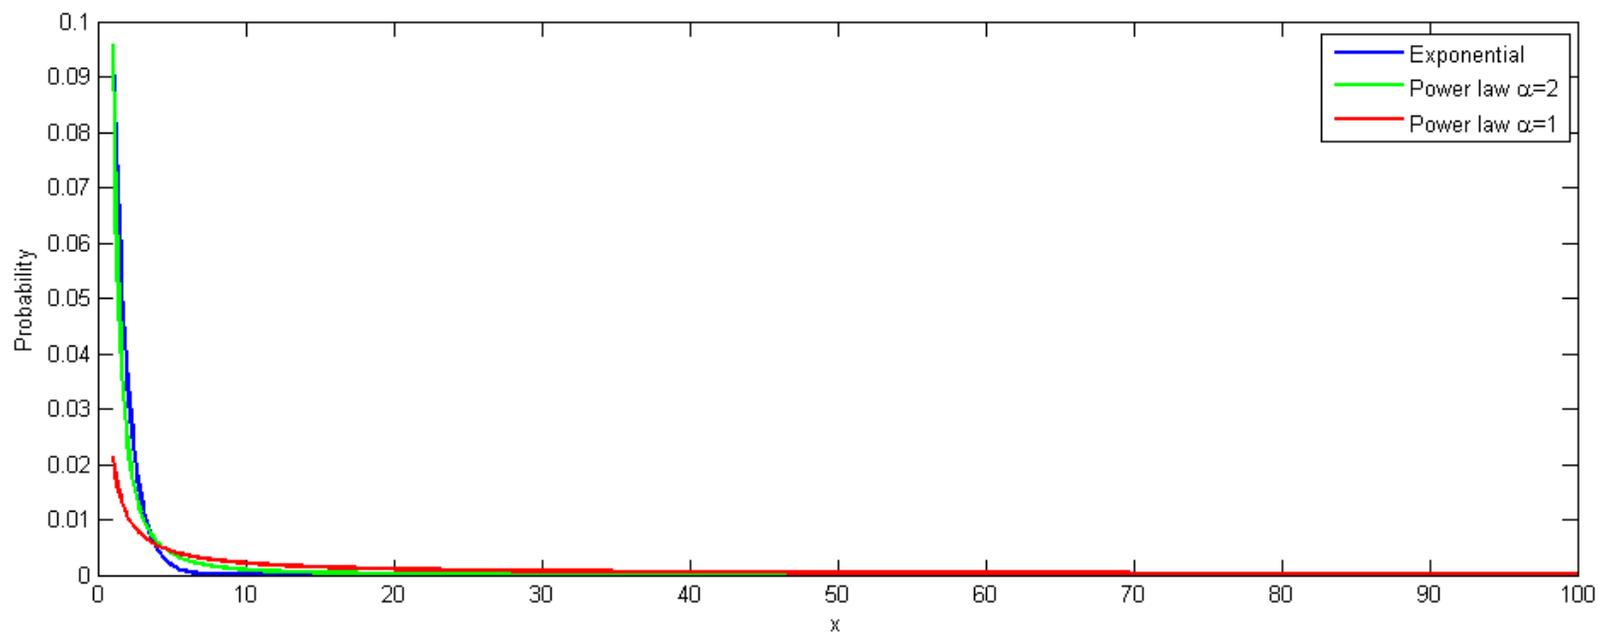

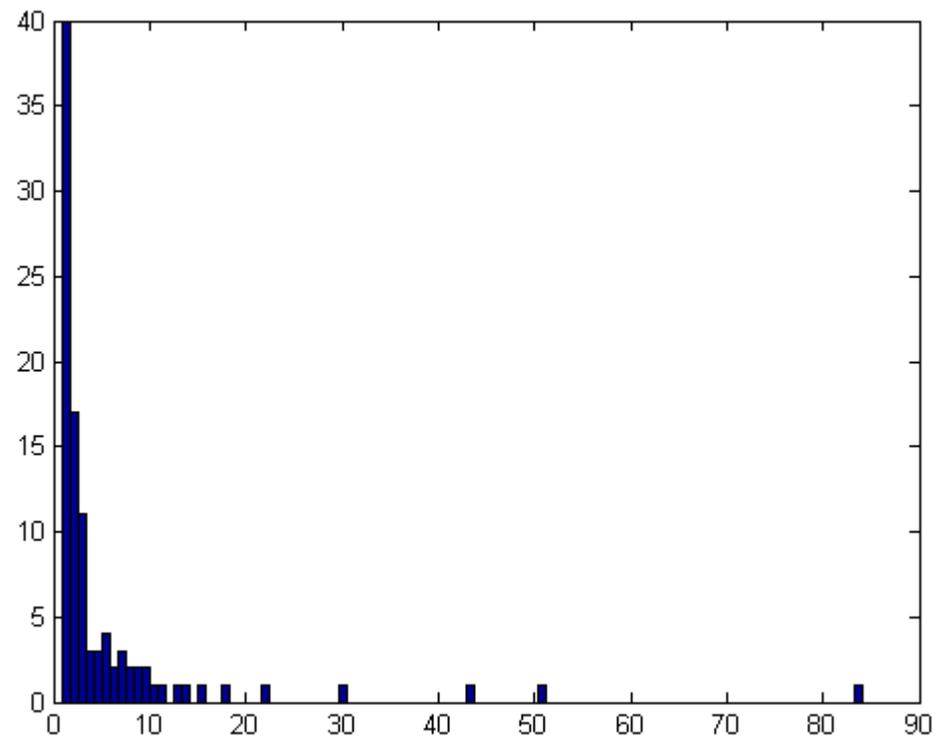

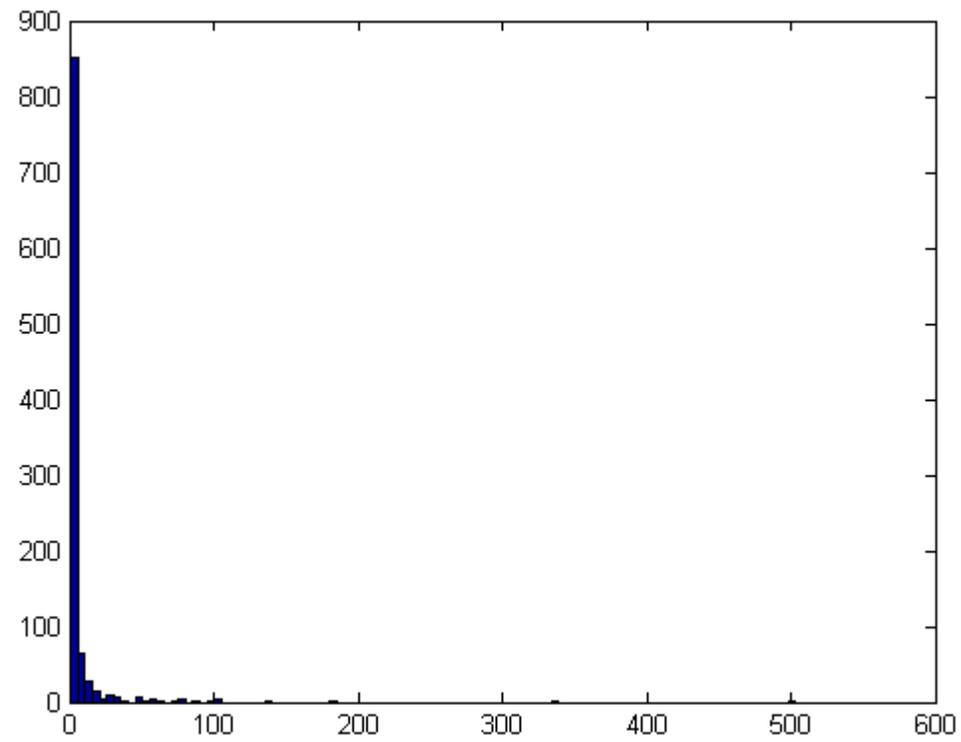

Рис. 1.10. Аномальная волна, зарегистрированная с буй в Черном море 22 ноября 2001 г. [12, 30]

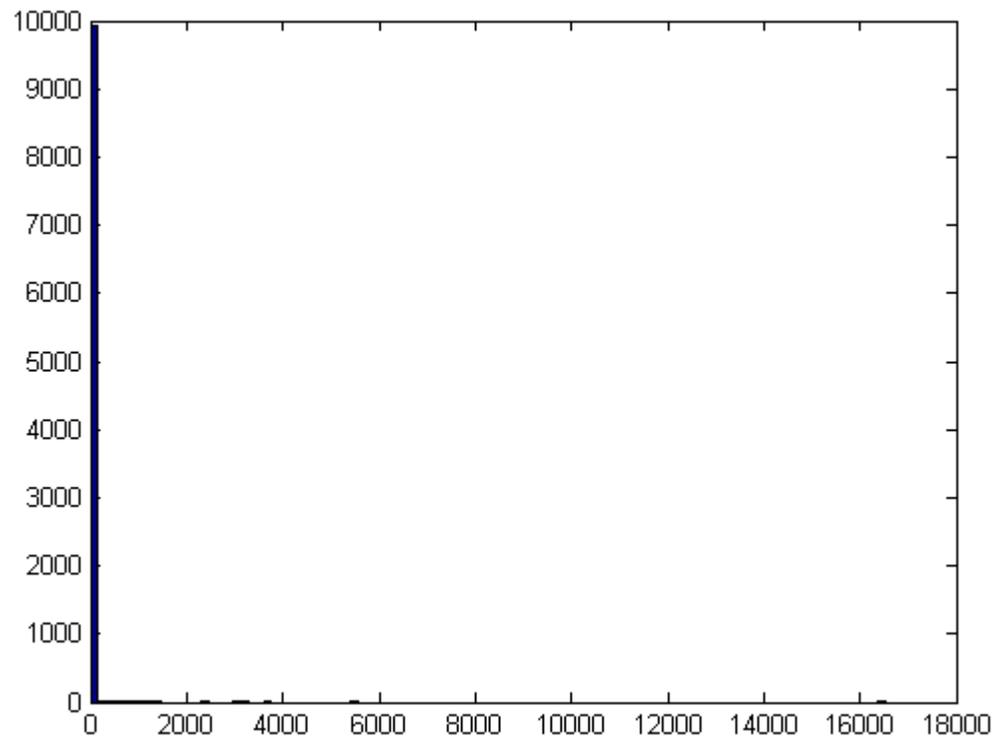

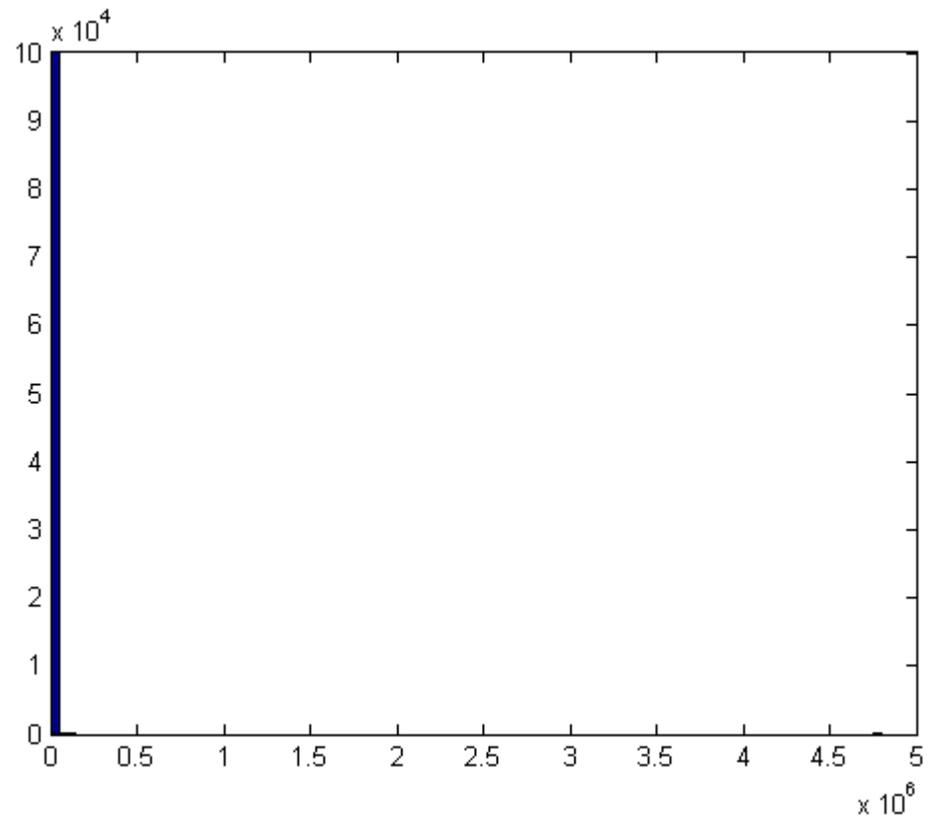

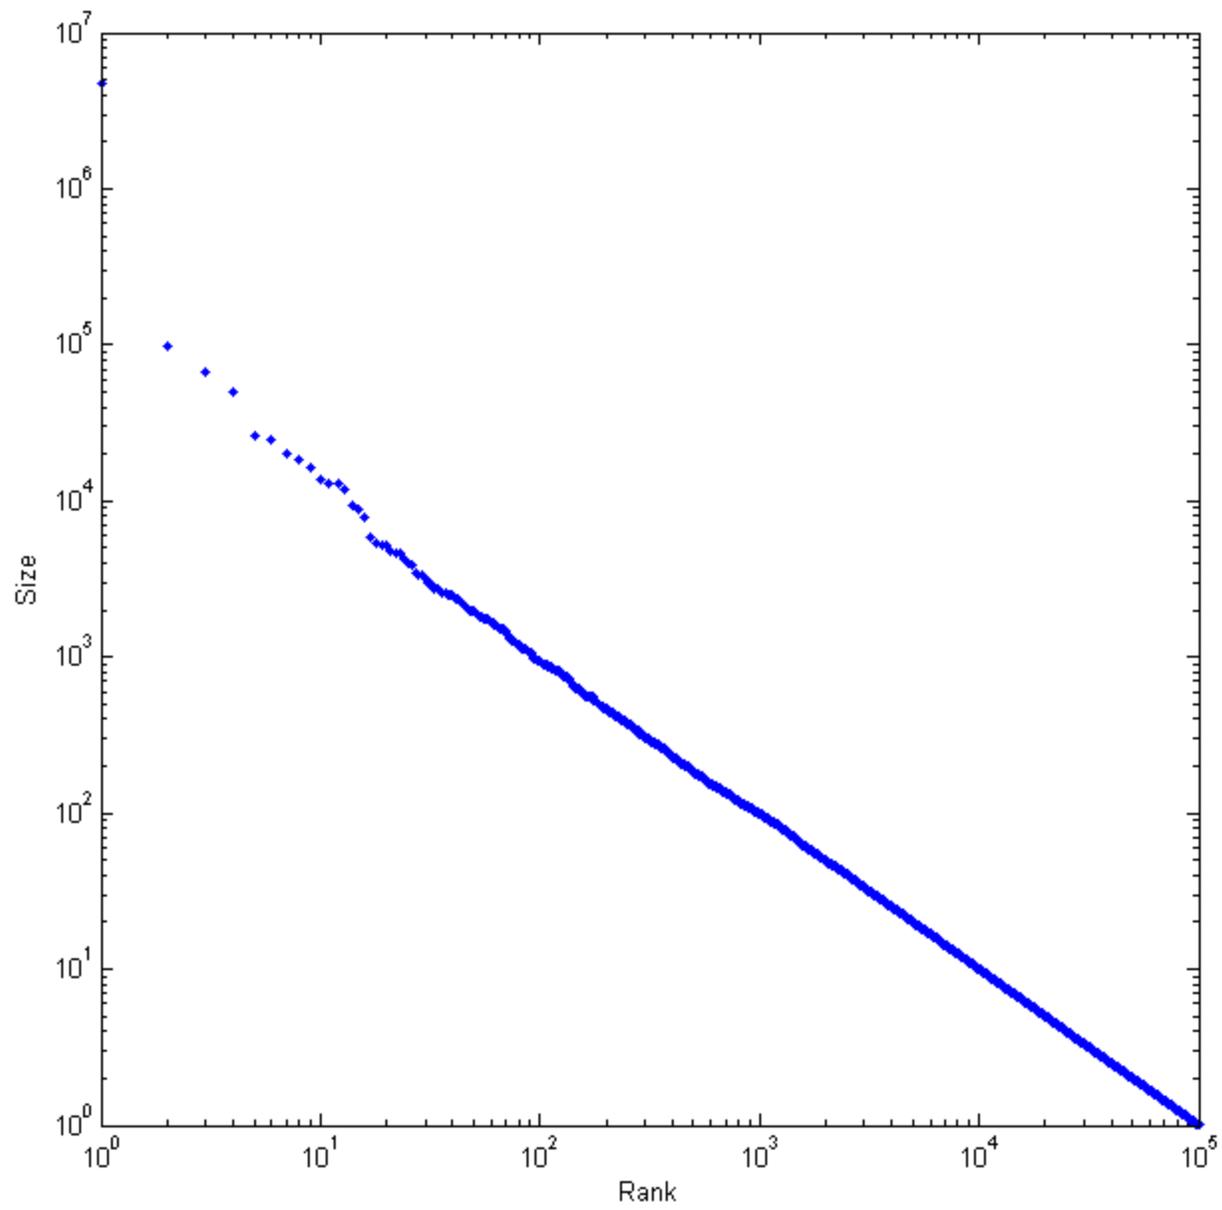

$$p(x) = \frac{\alpha - 1}{x_{\min}} \left(\frac{x}{x_{\min}} \right)^{-\alpha}$$

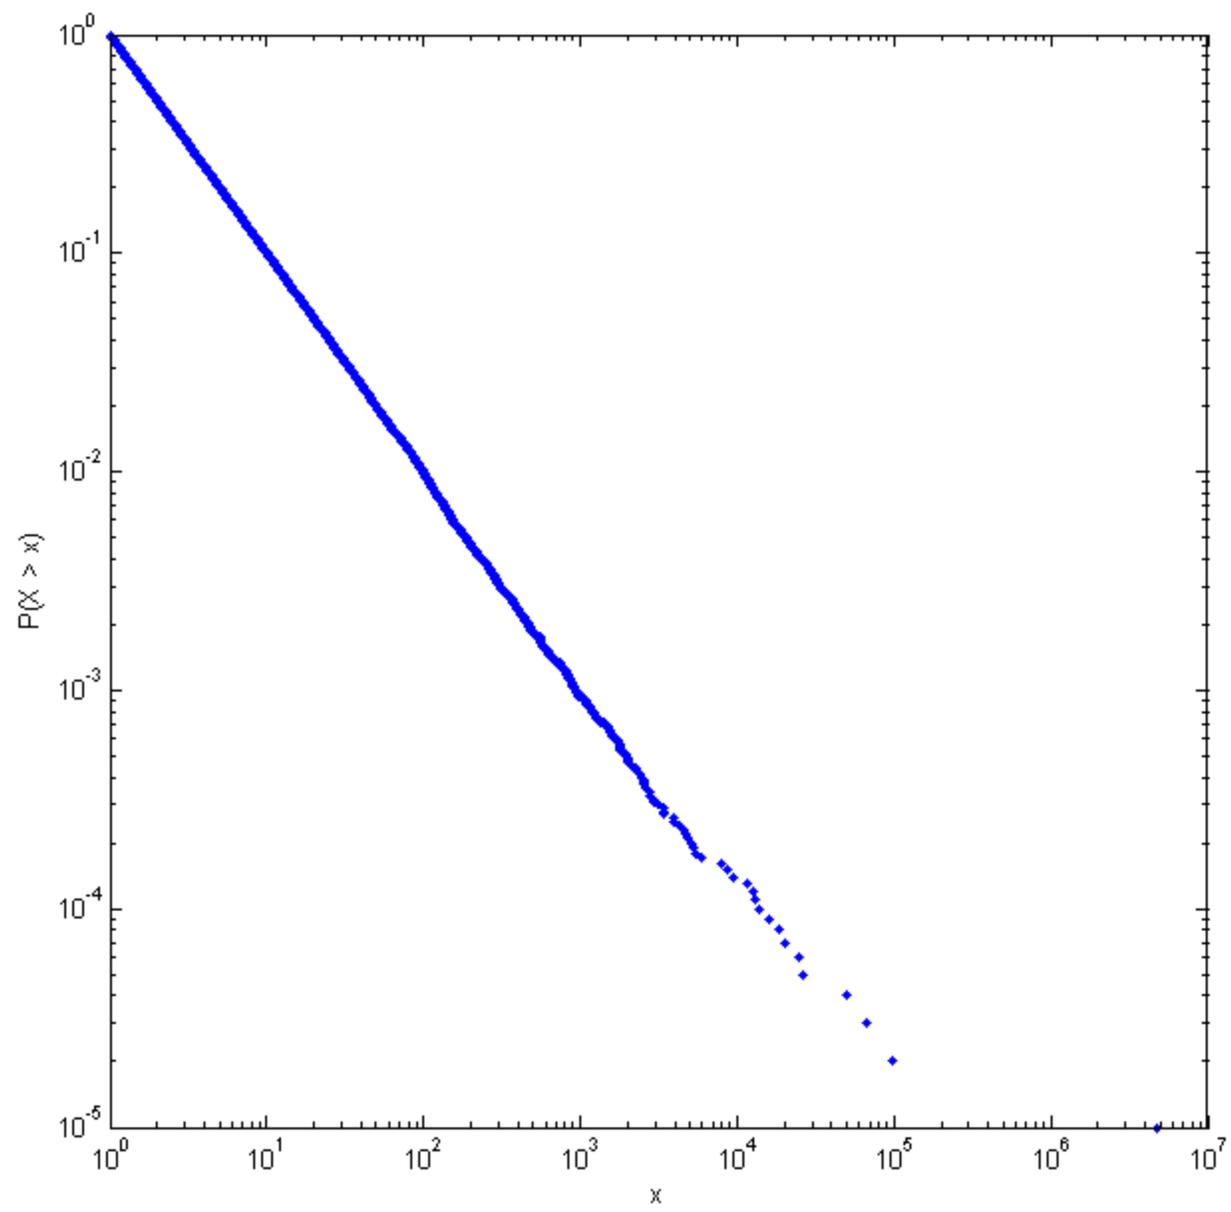

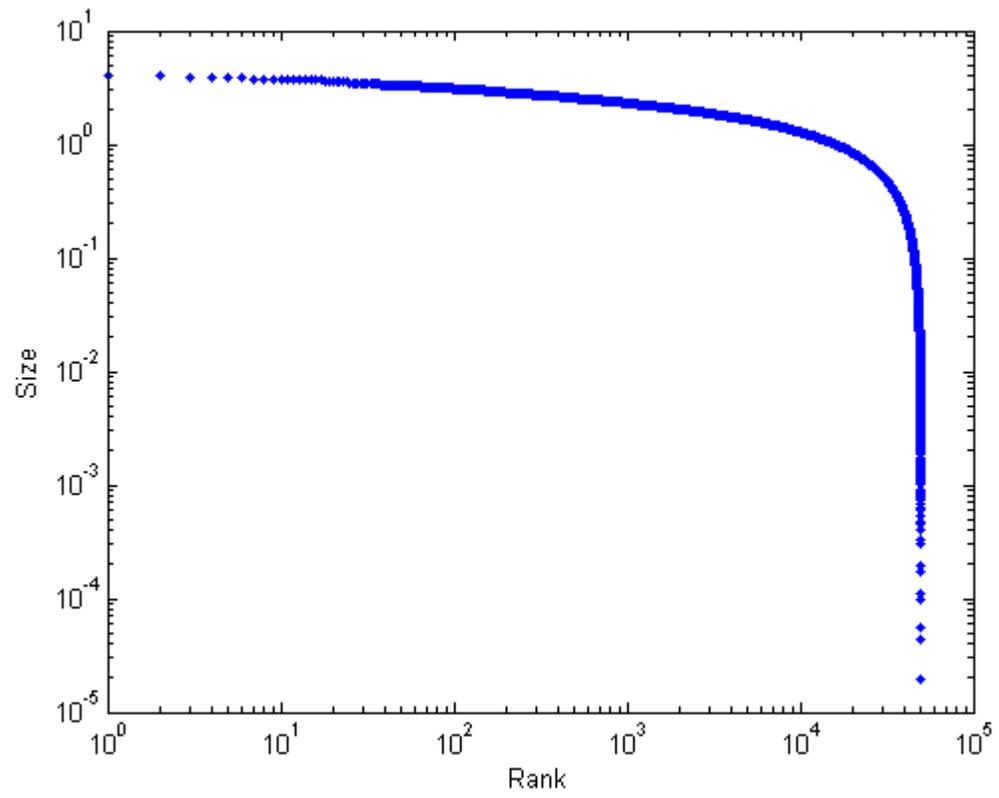

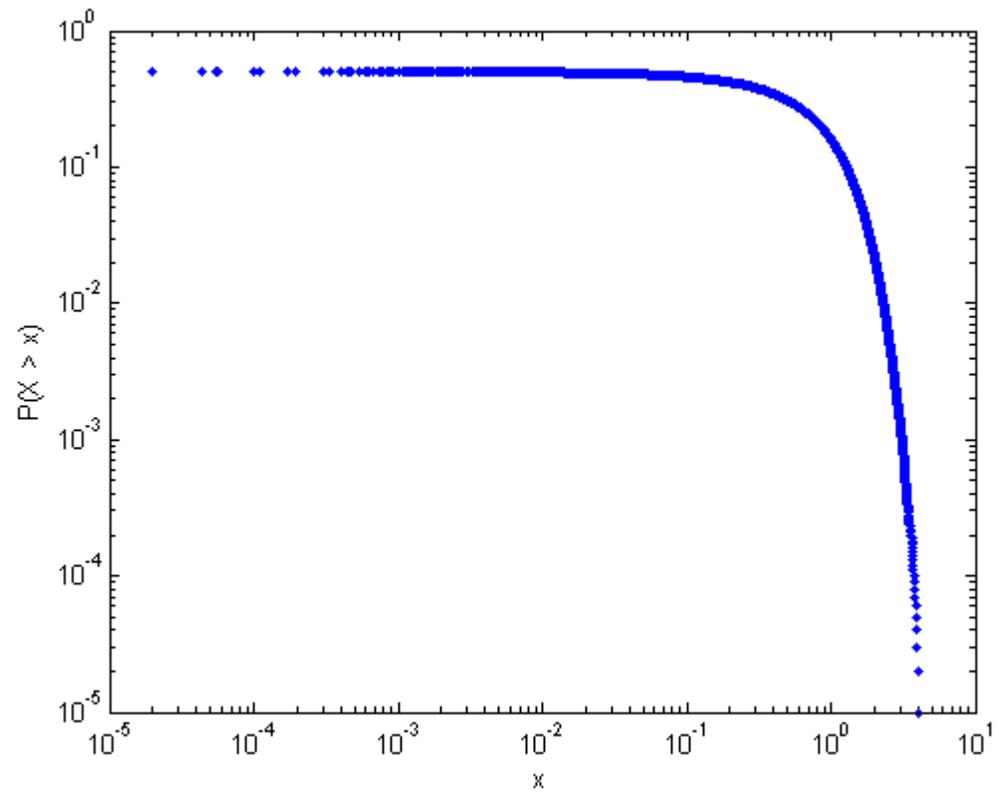

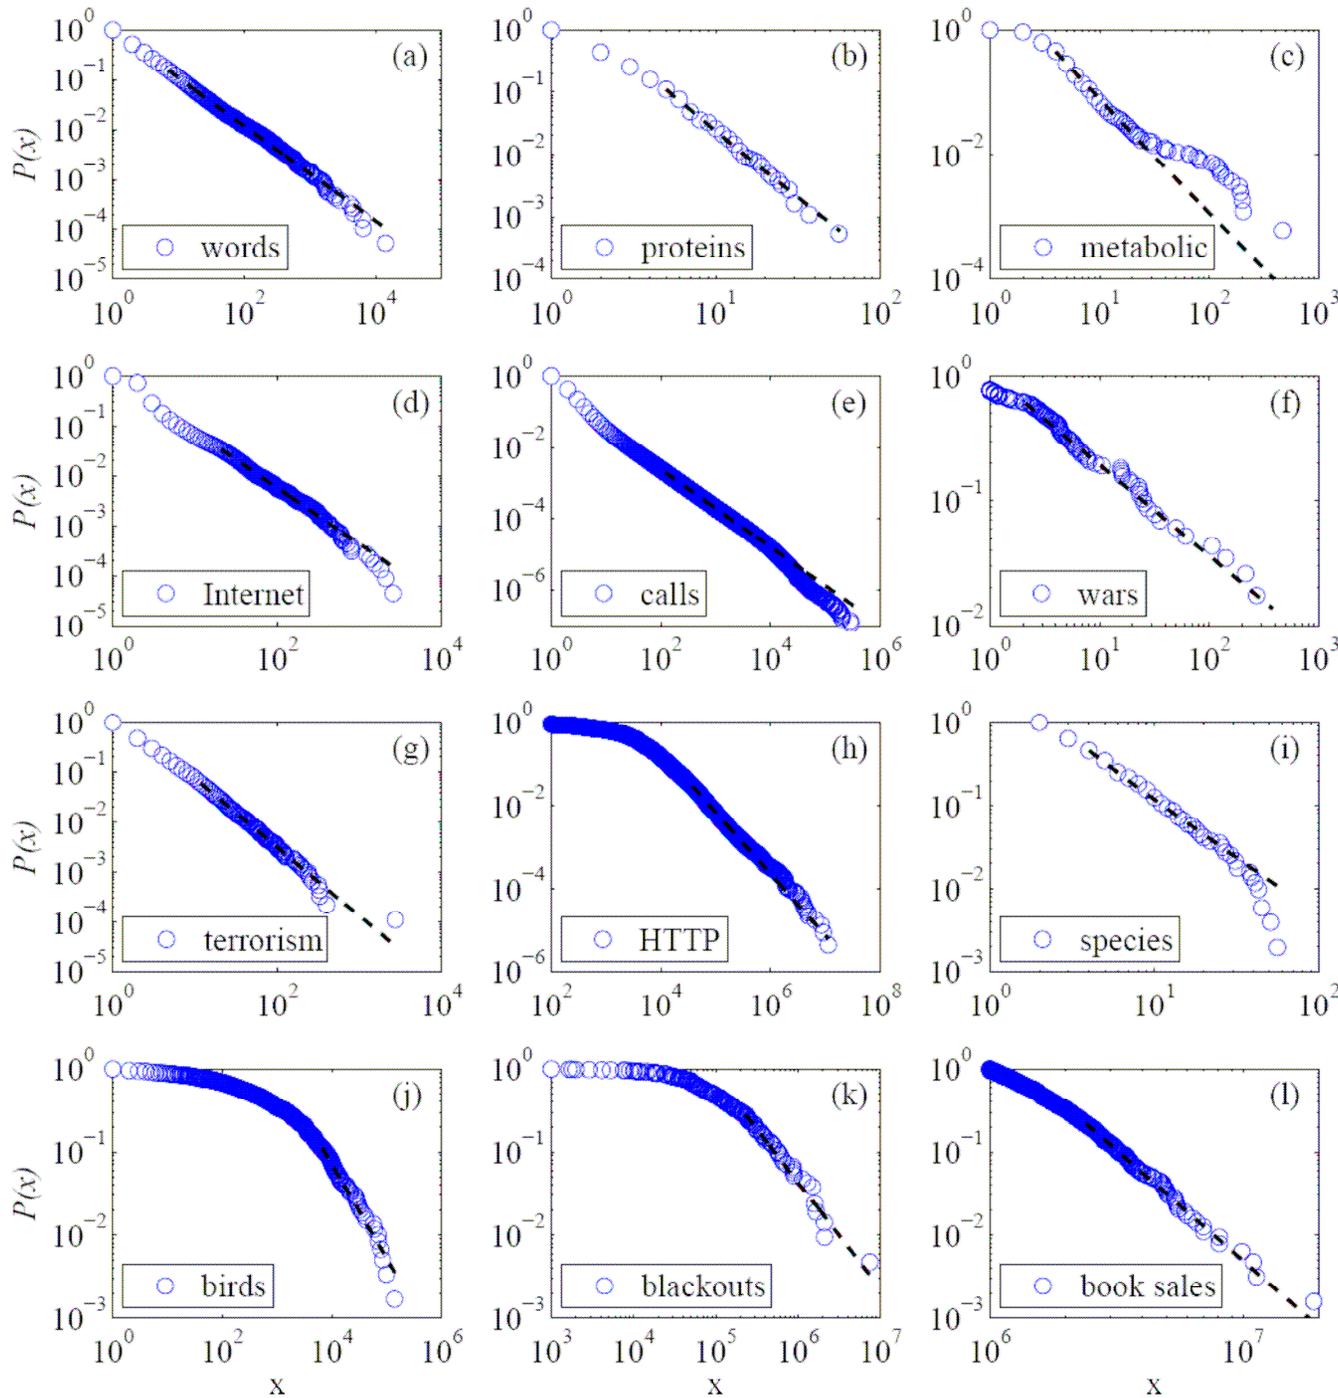

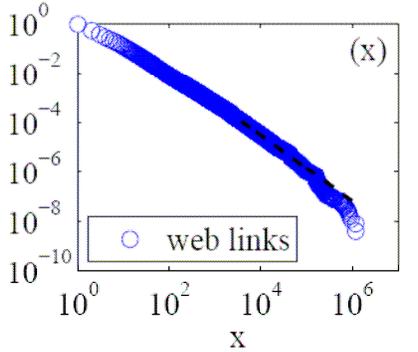

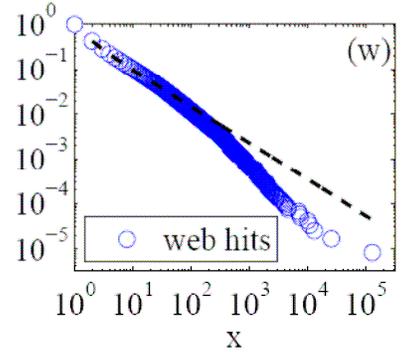

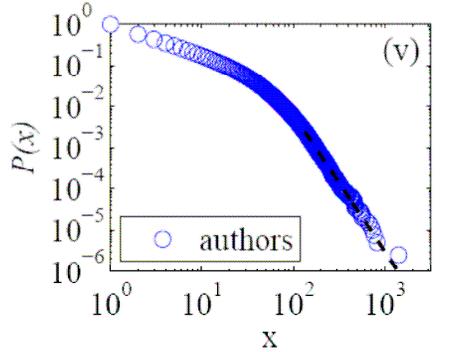

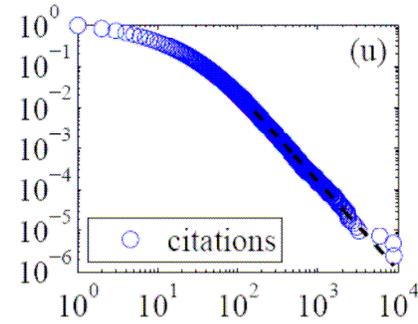

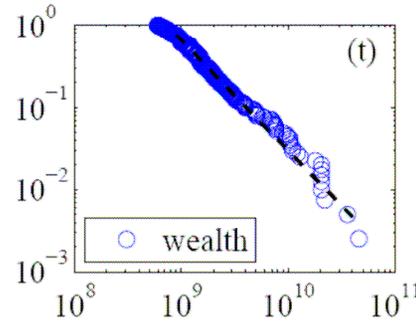

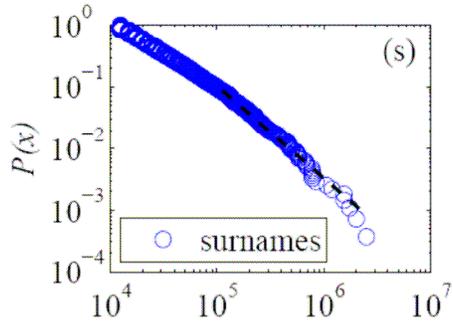

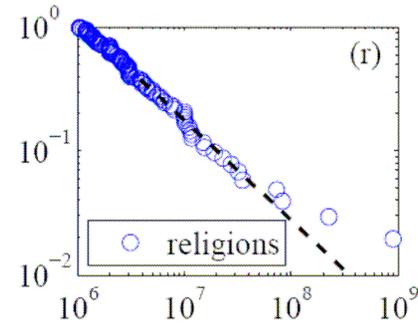

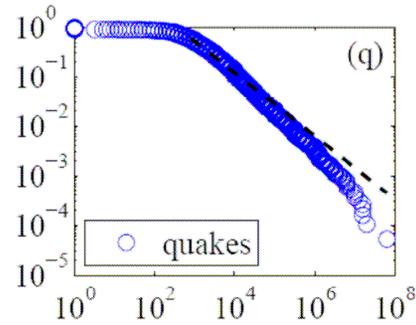

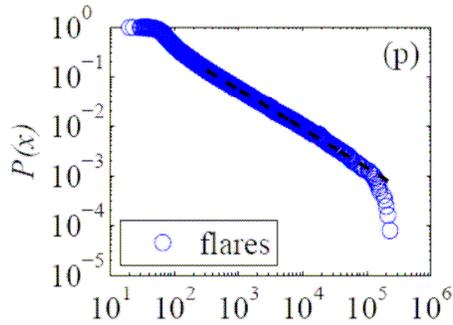

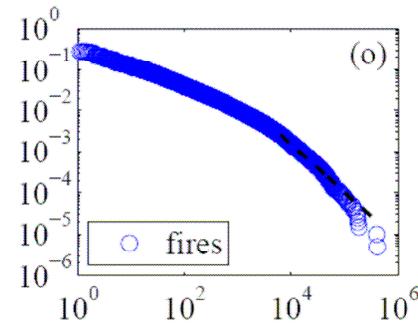

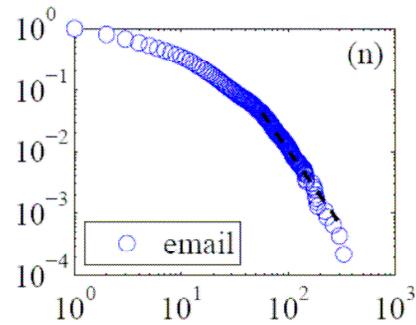

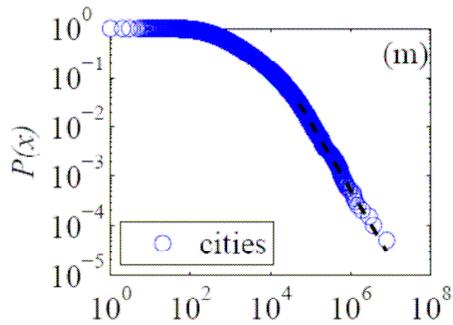

(a) The frequency of occurrence of unique words in the novel *Moby Dick* by Herman Melville. (b) The degree distribution of proteins in the protein interaction network of the yeast *S. cerevisiae*. (c) The degree distribution of metabolites in the metabolic network of the bacterium *E. coli*.

(d) The degree distribution of autonomous systems (groups of computers under single administrative control) on the Internet. (e) The number of calls received by US customers of the long-distance telephone carrier AT&T. (f) The intensity of wars from 1816–1980 measured as the number of battle deaths per 10 000 of the combined populations of the warring nations.

(g) The severity of terrorist attacks worldwide from February 1968 to June 2006, measured by number of deaths. (h) The number of bytes of data received in response to HTTP (web) requests from computers at a large research laboratory. (i) The number of species per genus of mammals during the late Quaternary period.

(j) The frequency of sightings of bird species in the United States. (k) The number of customers affected by electrical blackouts in the United States. (l) The sales volume of bestselling books in the United States.

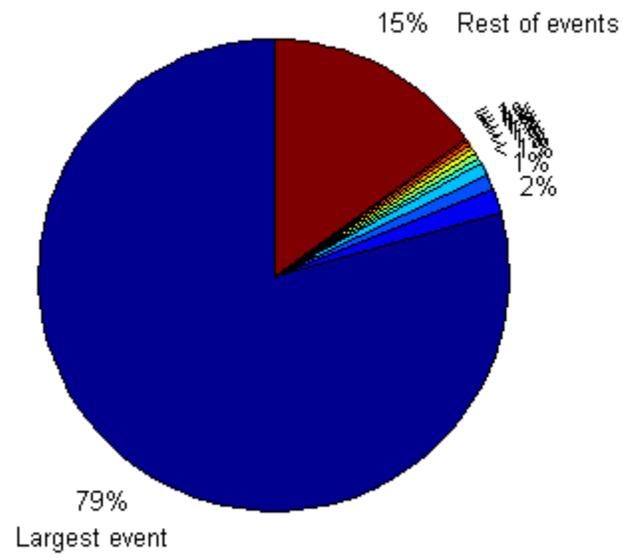

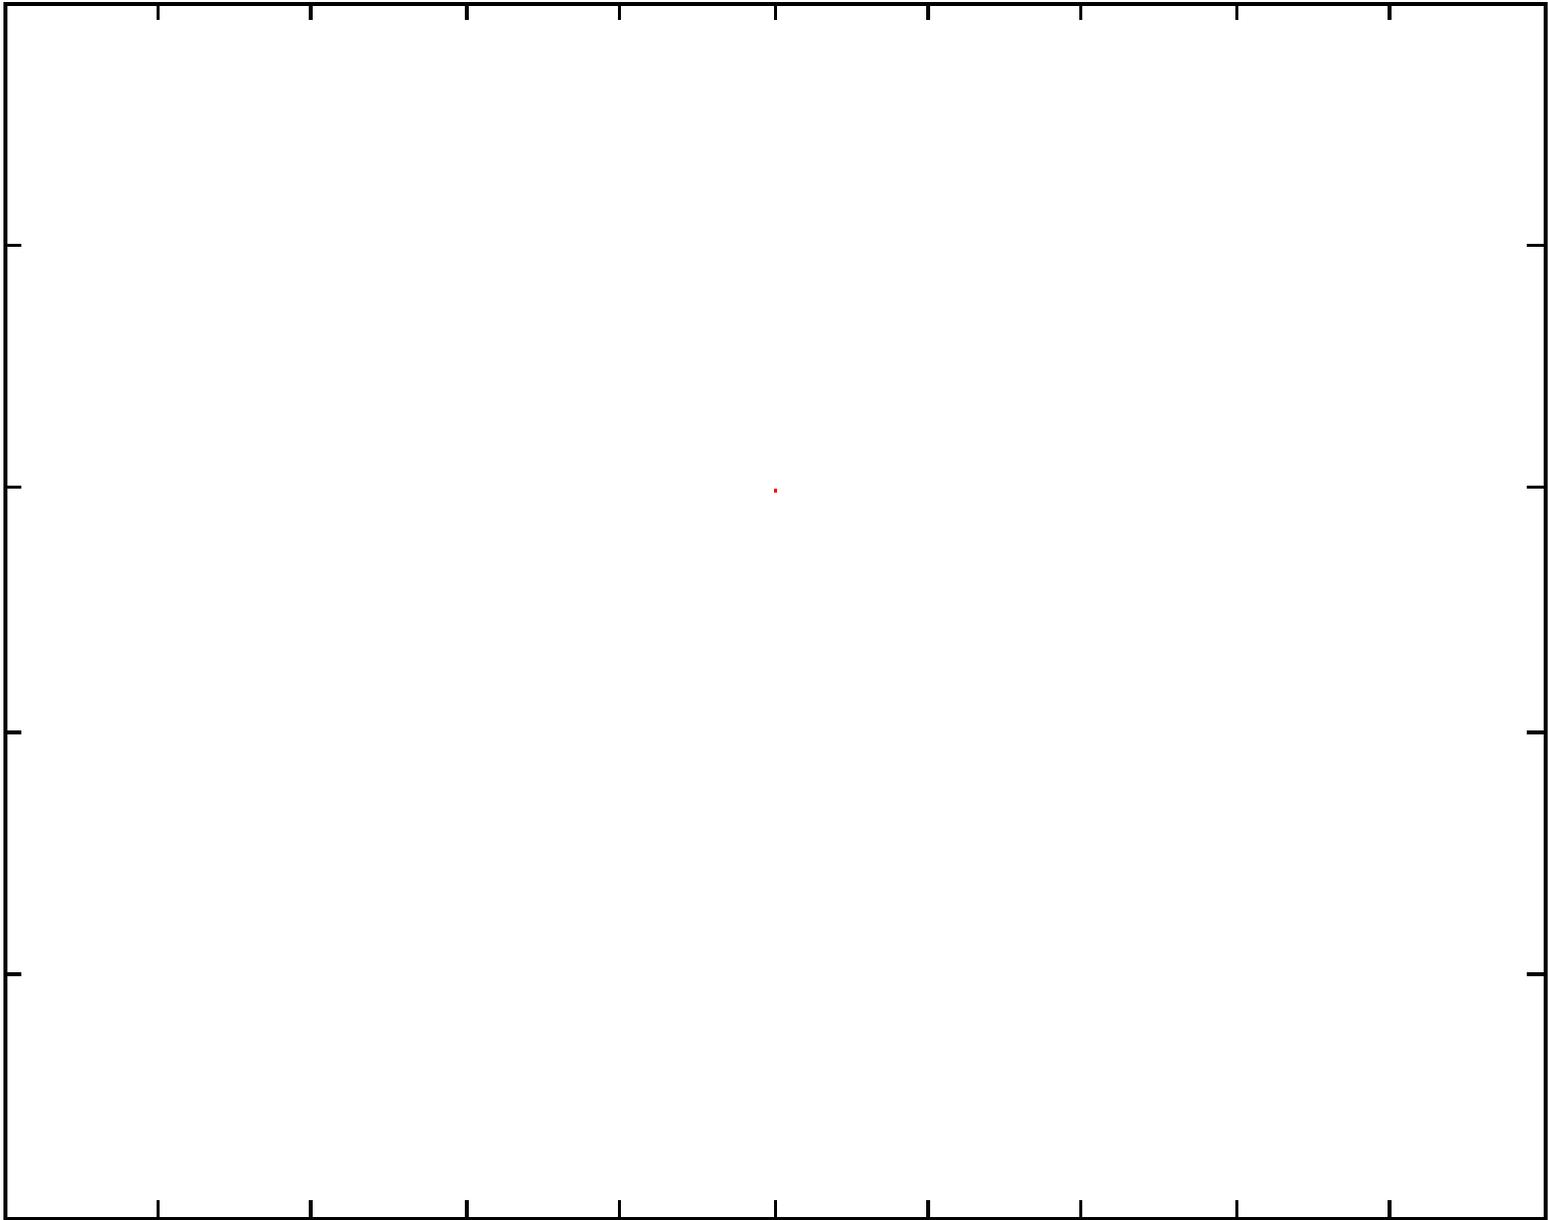

(m) The populations of cities in the United States. (n) The sizes of email address books at a university. (o) The number of acres burned in California forest fires.

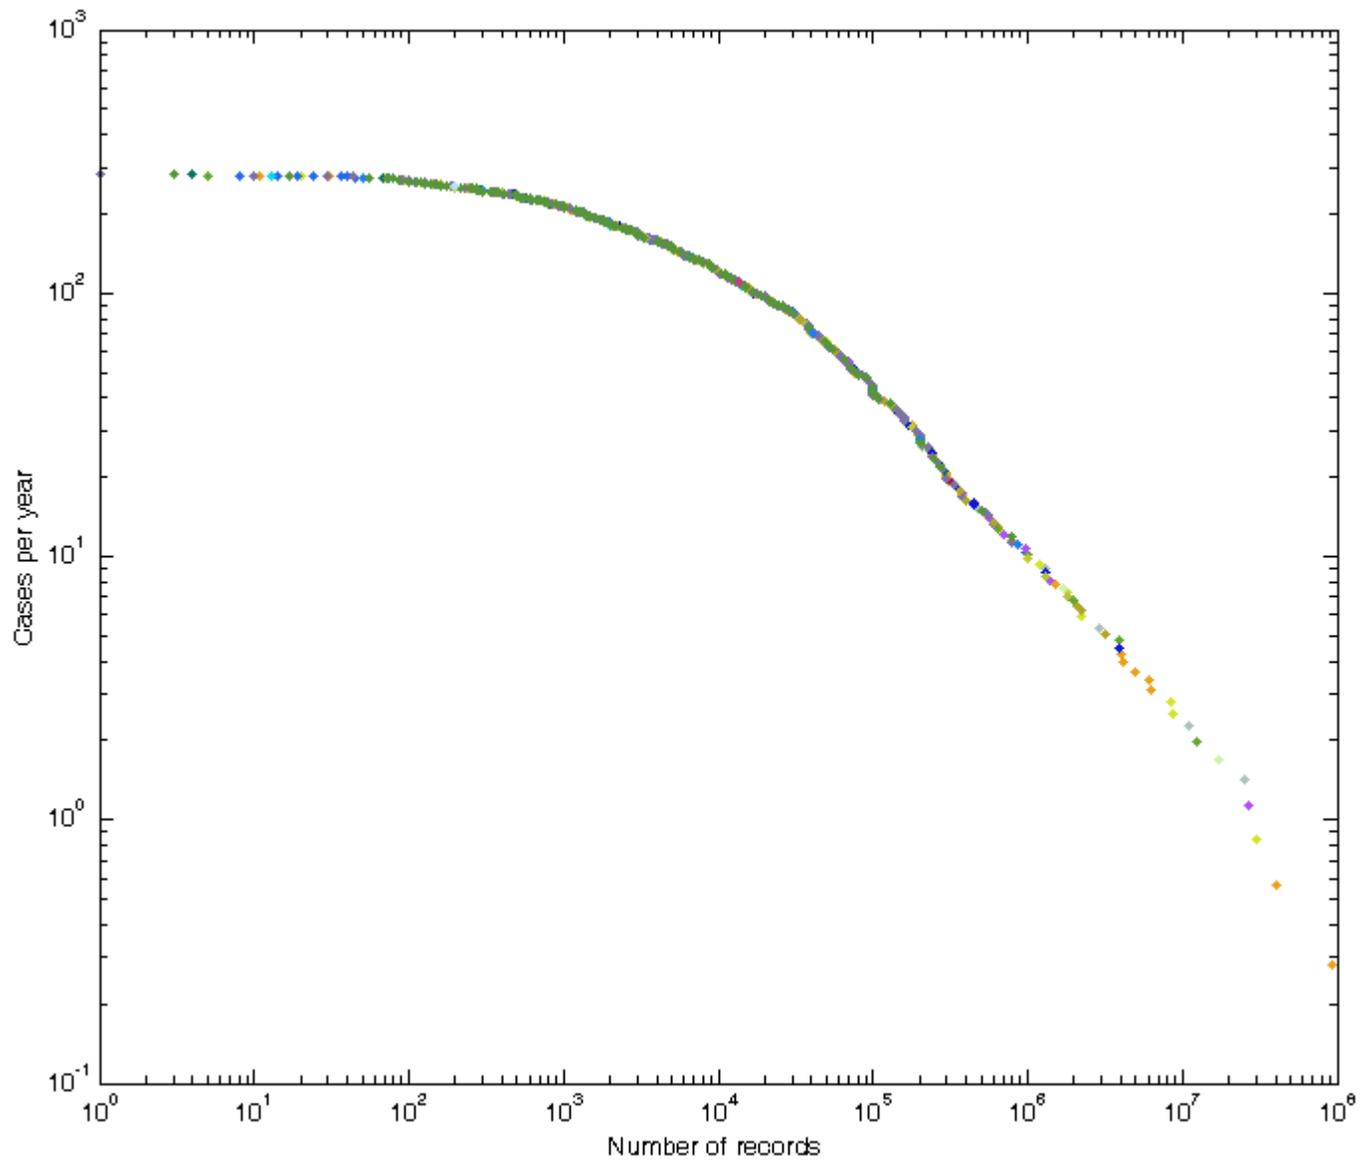

(p) The intensities of solar flares. (q) The intensities of earthquakes. (r) The numbers of adherents of religious sects.

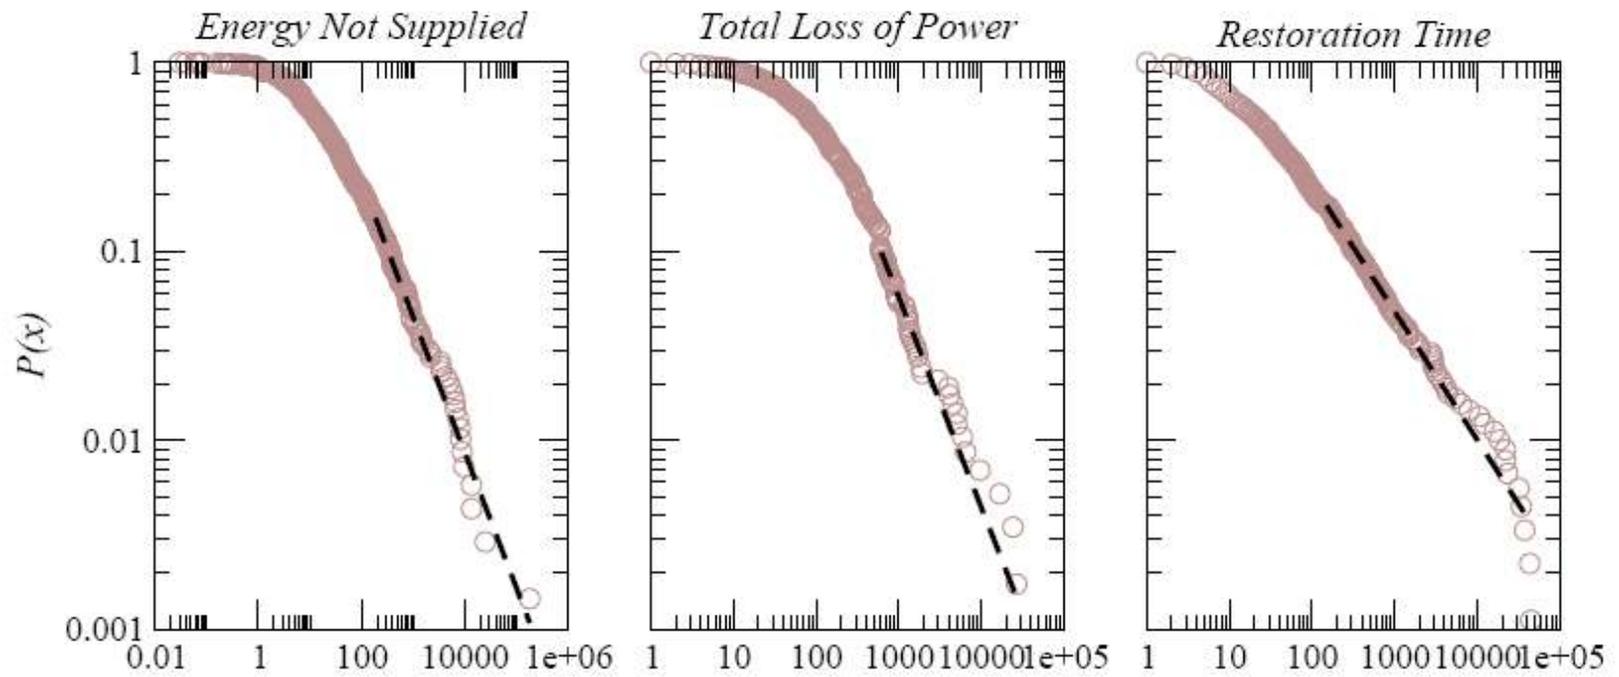

(s) The frequencies of surnames in the United States. (t) The net worth in US dollars of the richest people in America. (u) The numbers of citations received by published academic papers.

(v) The numbers of papers authored by mathematicians. (w) The numbers of hits on web sites from AOL users. (x) The numbers of hyperlinks to web sites.

GCR conference survey

Total killed in all acts of nuclear terrorism.

>1 million dead: median 15%

>1 billion dead: median 1%

Extinction: median 0.03%

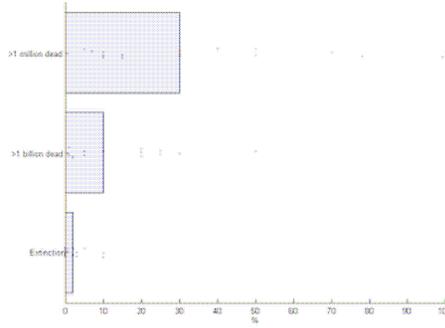

Number killed in the single biggest engineered pandemic.

>1 million dead: median 30%

>1 billion dead: median 10%

Extinction: median 2%

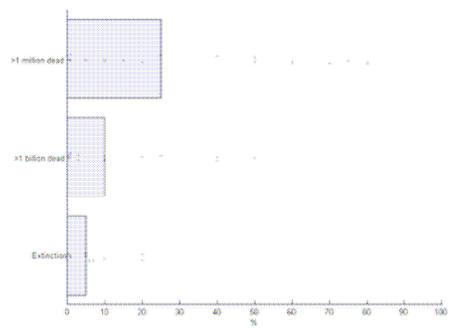

Number killed by molecular nanotech weapons.

>1 million dead: median 25%

>1 billion dead: median 10%

Extinction: median 5%

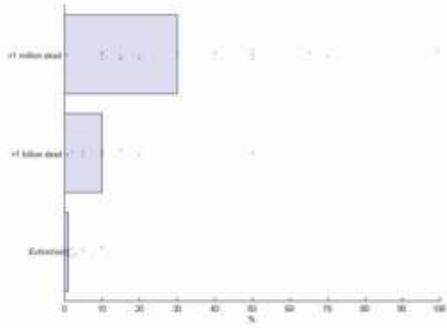

Total killed in all nuclear wars.

>1 million dead: median 30%

>1 billion dead: median 10%

Extinction: median 1%

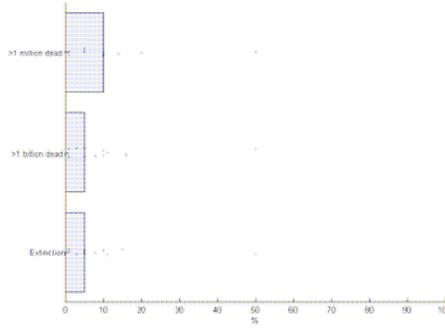

Total killed by superintelligent AI.

>1 million dead: median 10%

>1 billion dead: median 5%

Extinction: median 5%

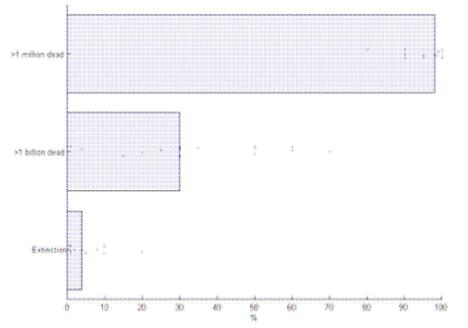

Total killed in all wars (including civil wars).

>1 million dead: median 98%

>1 billion dead: median 30%

Extinction: median 4%

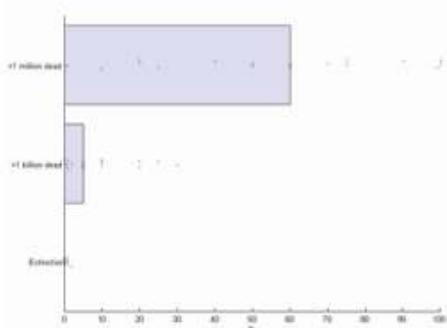

Number killed in the single biggest natural pandemic.

>1 million dead: median 60%

>1 billion dead: median 5%

Extinction: median 0.05%

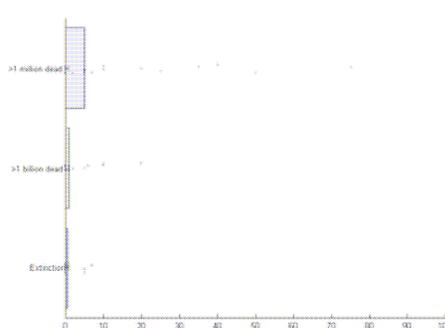

Number killed in the single biggest nanotech accident.

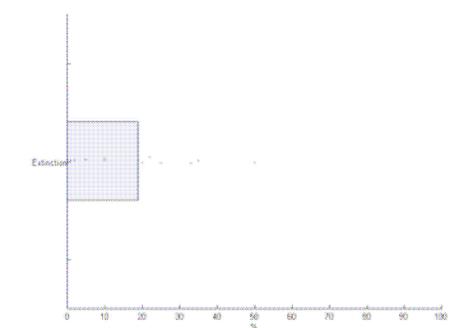

>1 million dead: median 5%

>1 billion dead: median 1%

Extinction: median 0.5%

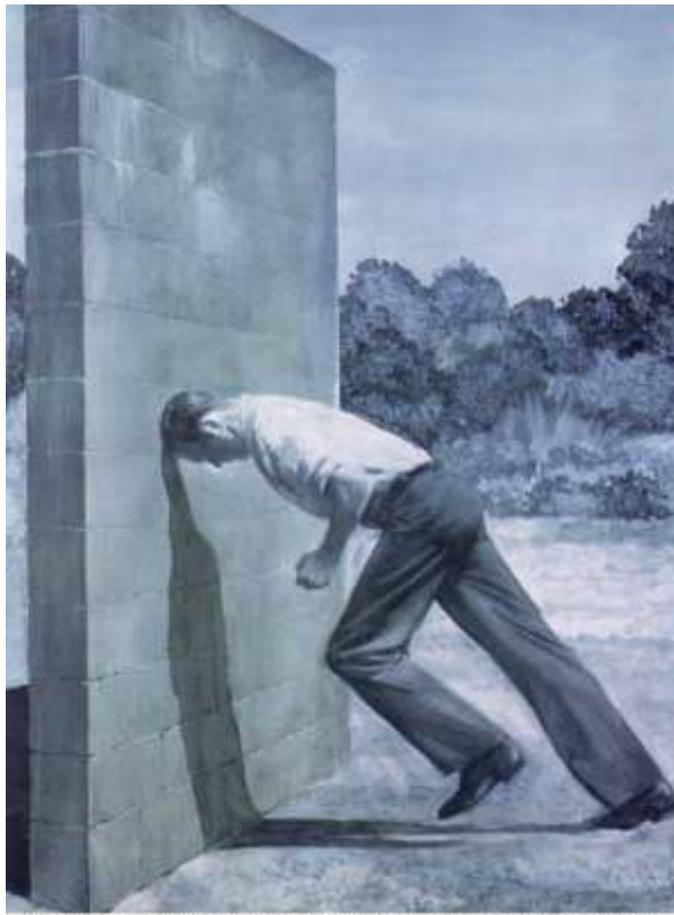

Total risk of extinction: median 19%

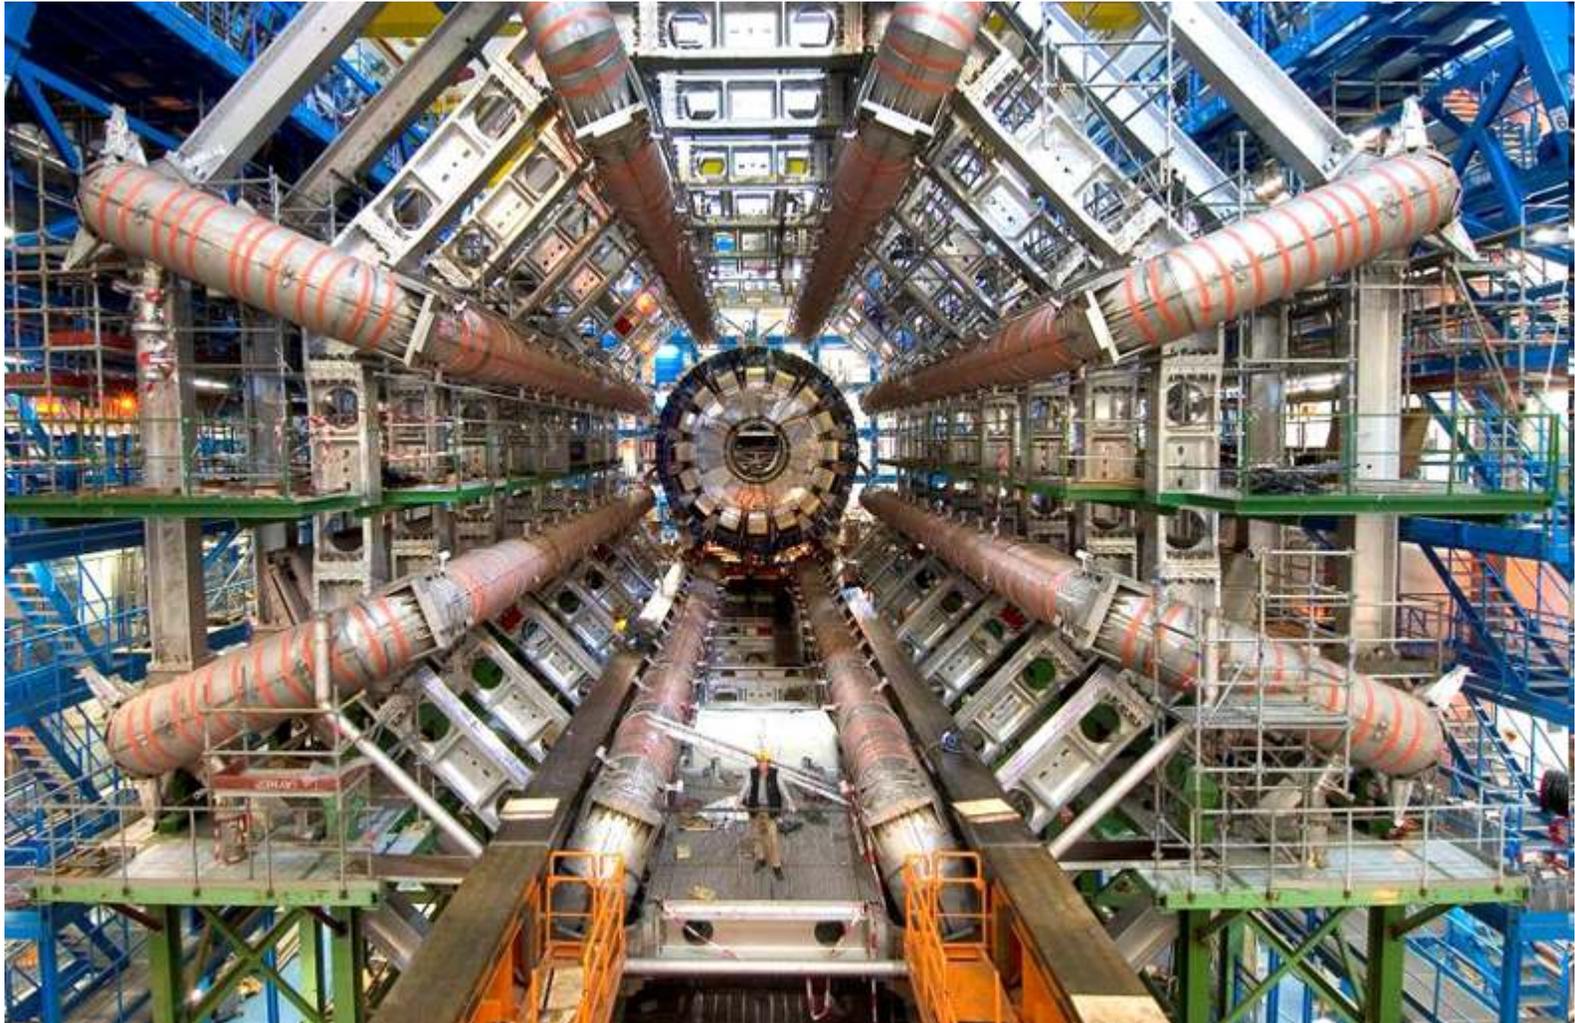

Risks we have no clue about: dragons

***“It is pitch black.
You are likely to
be eaten by a
grue.”***

-Infocom

A SHORT HISTORY OF MODERNIST PAINTING" (DETAIL) MARK TANSEY

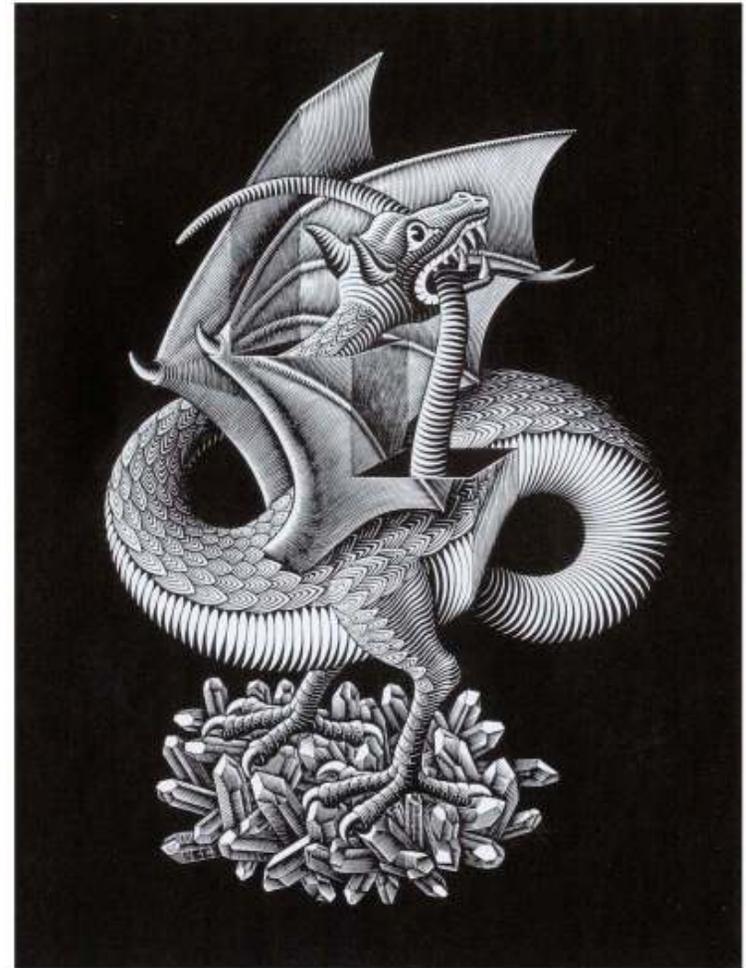

“Because of Werner Heisenberg's uncertainty principle, there is a tiny chance that anything will occur. There is a chance that firebreathing dragons will be produced by the LHC.”

- Michio Kaku

“Everyone knows that dragons don't exist. But while this simplistic formulation may satisfy the layman, it does not suffice for the scientific mind.”

-Stanislaw Lem, The Cyberiad (The Third Sally, The Dragons of Probability)

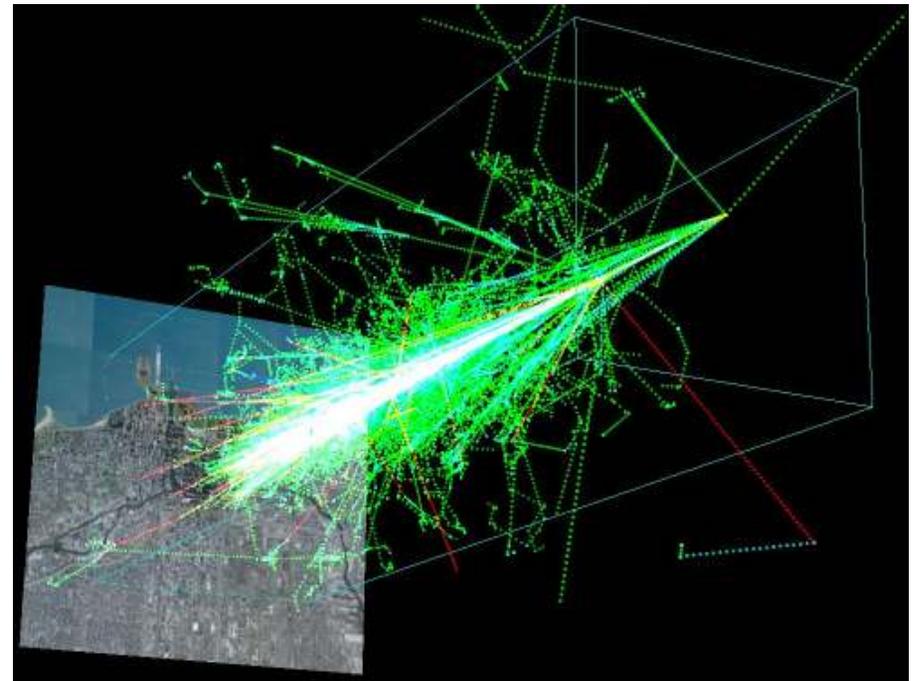

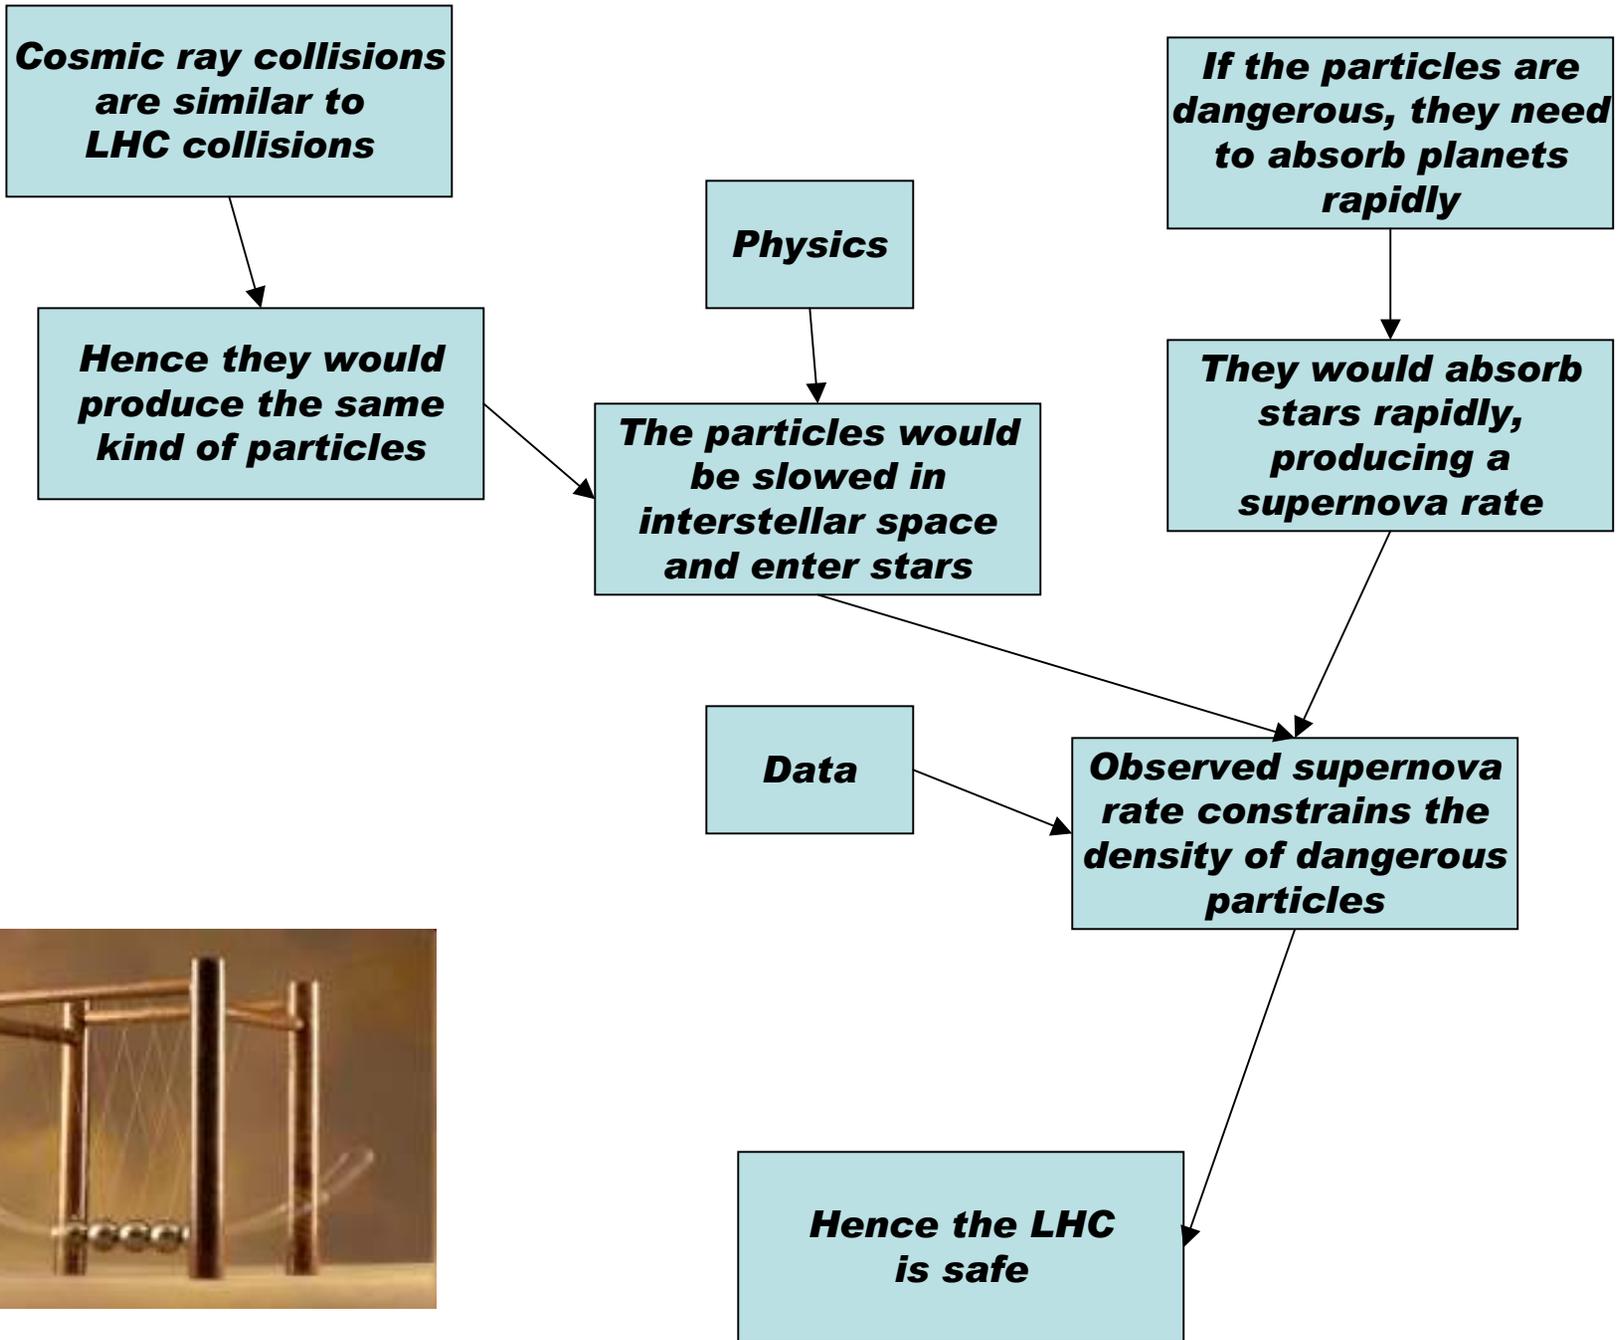

**Cosmic ray collisions
are similar to
LHC collisions**

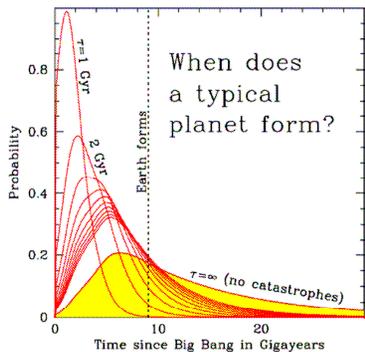

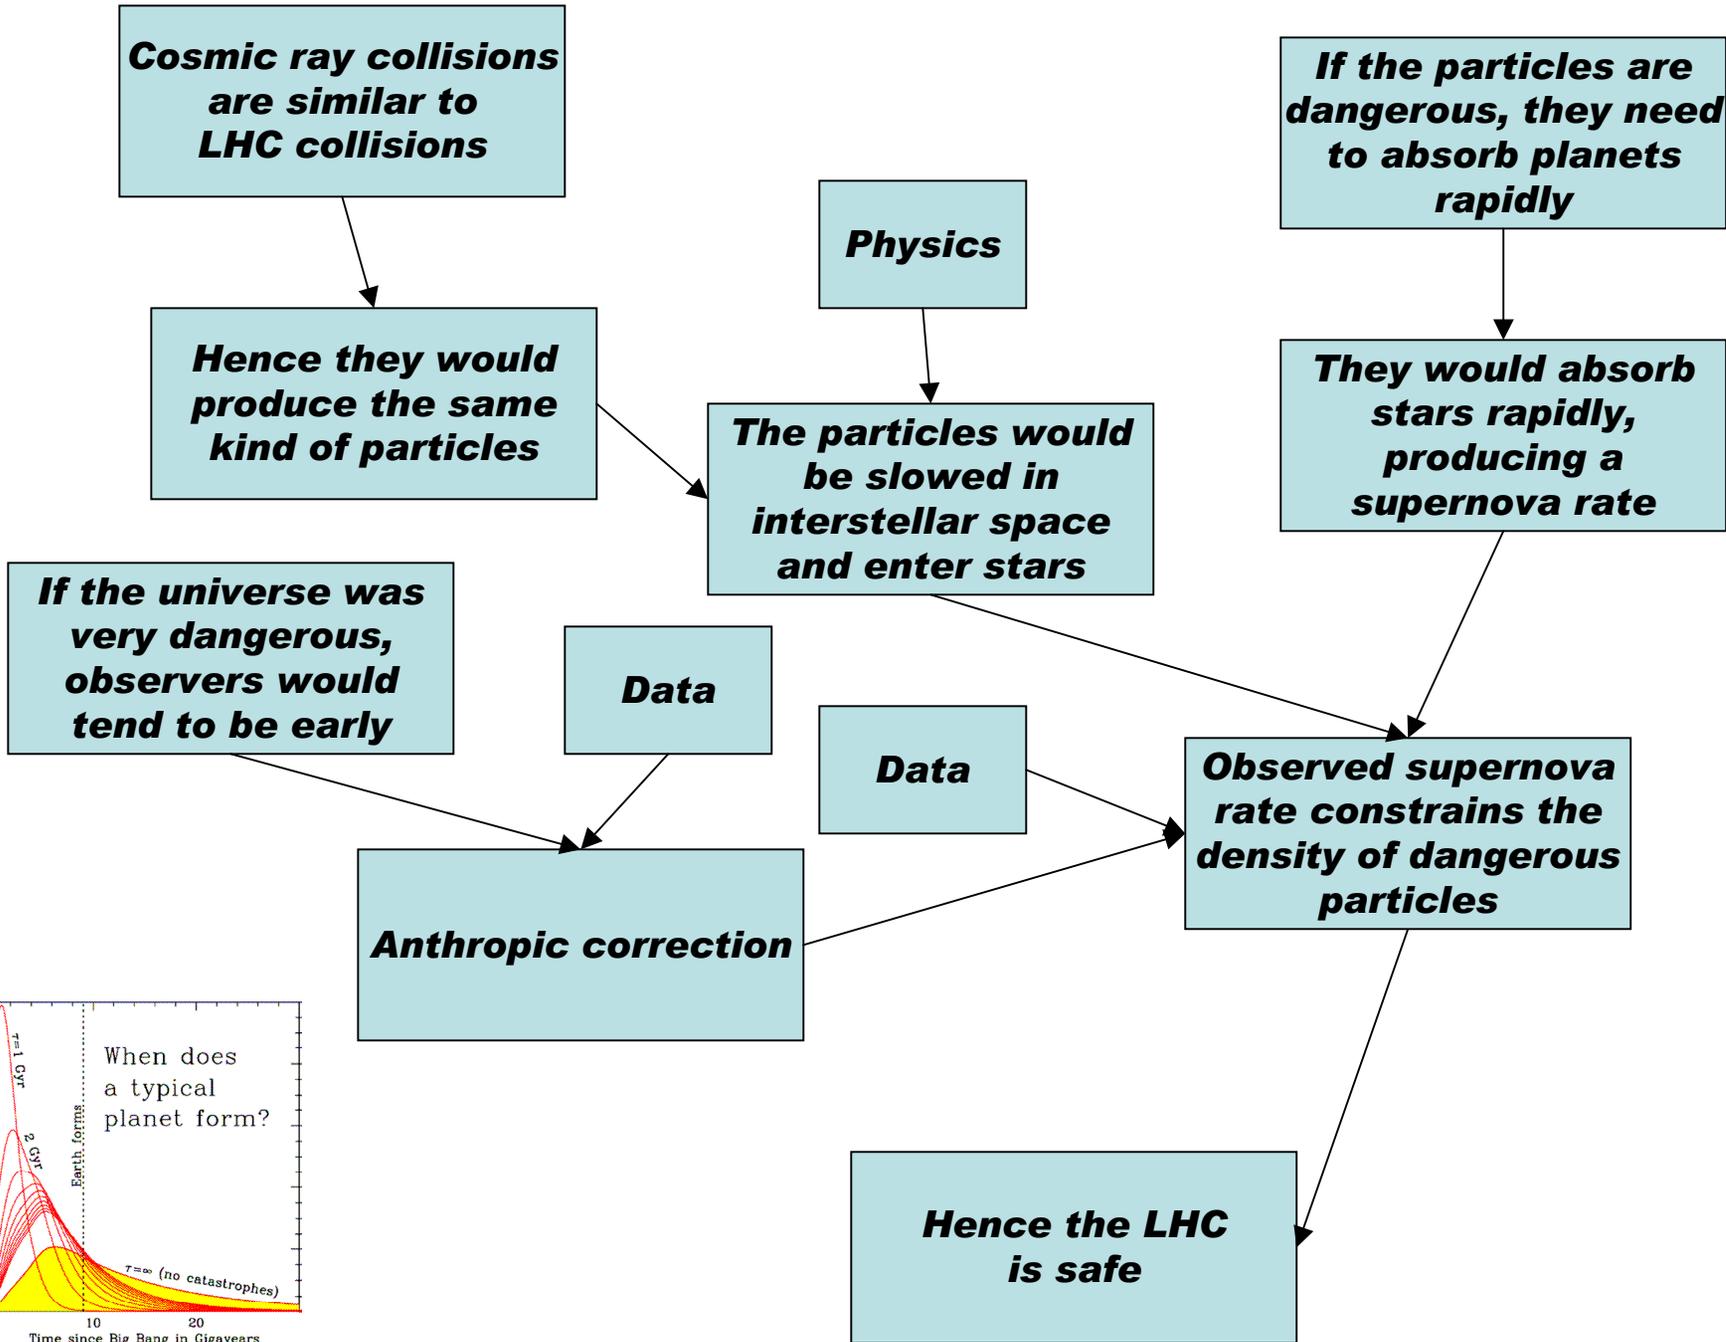

**Cosmic ray collisions
have occurred on
the Moon for eons**

and

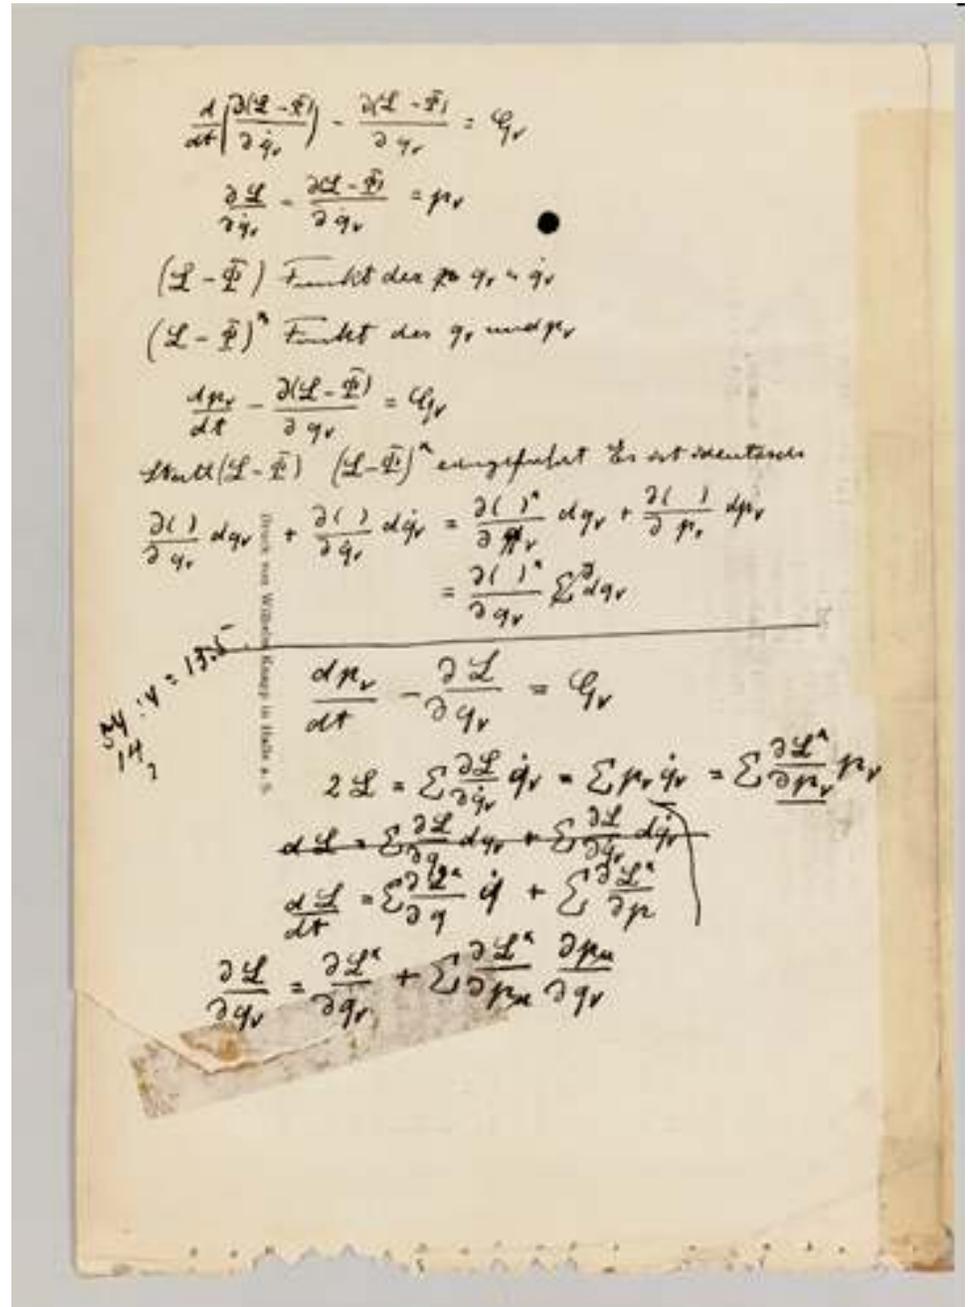

**Hence the LHC
is safe**

How often are scientific arguments wrong?

Unknown

Safe

Unsafe

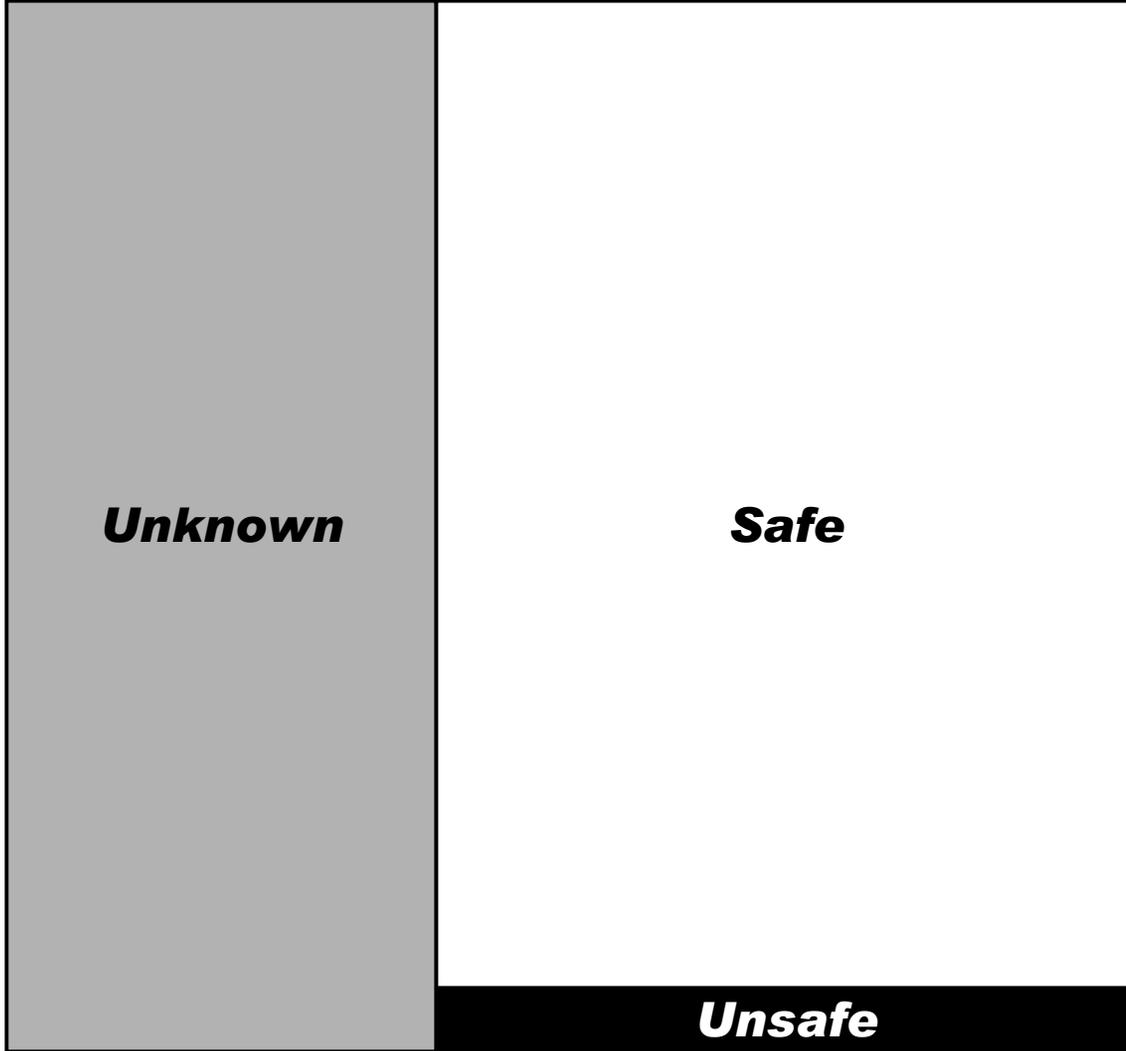

Argument is wrong

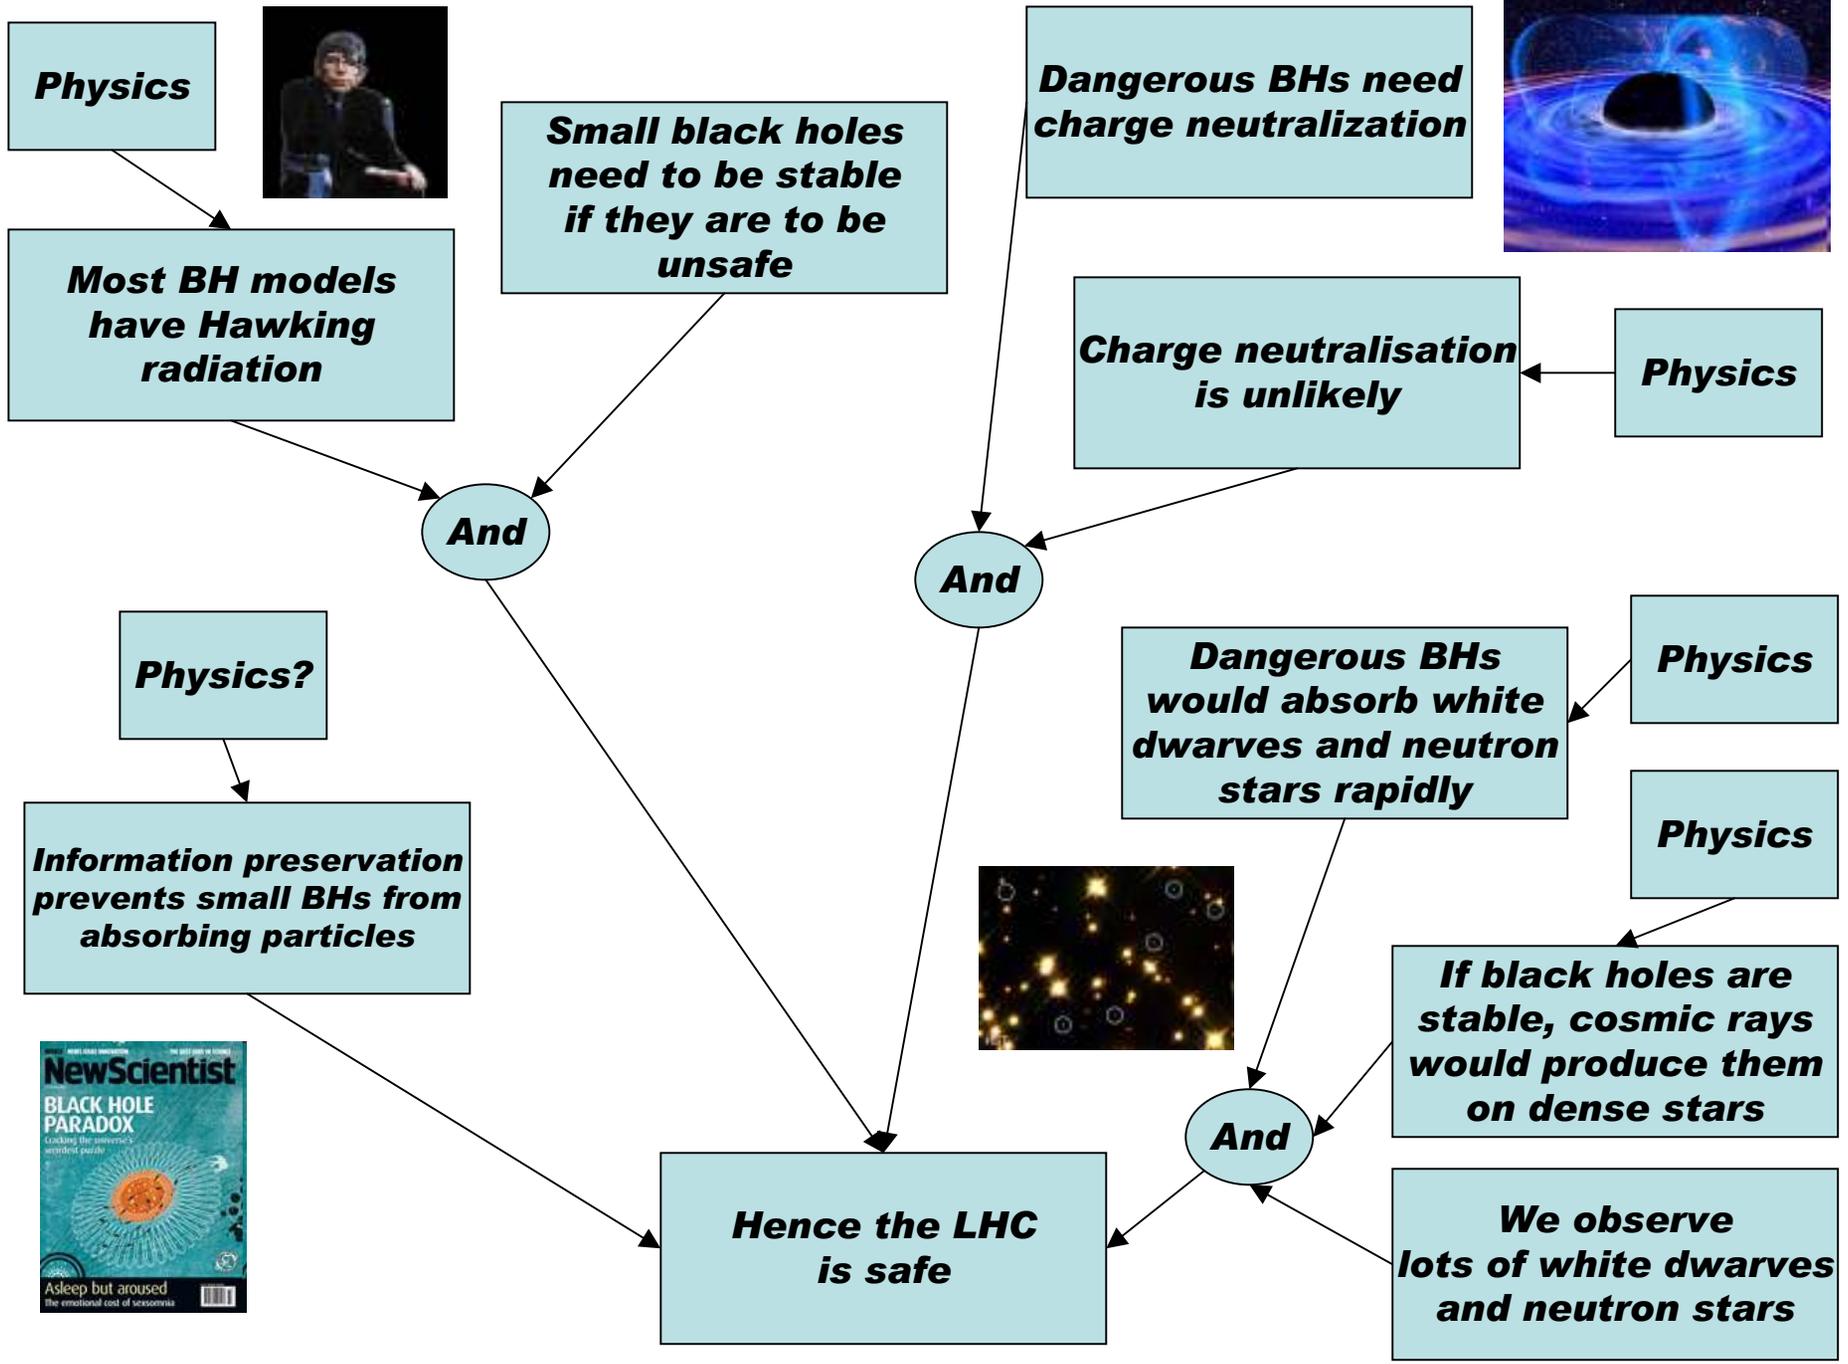

Argument is right

Unknown

Safe

Physics

Most BH models have Hawking radiation

Small black holes need to be stable if they are to be unsafe

And

Dangerous BHs need charge neutralization

Charge neutralisation is unlikely

Physics

And

Physics?

Information preservation prevents small BHs from absorbing particles

Dangerous BHs would absorb white dwarves and neutron stars rapidly

Physics

Physics

And

If black holes are stable, cosmic rays would produce them on dense stars

We observe lots of white dwarves and neutron stars

Hence the LHC is safe

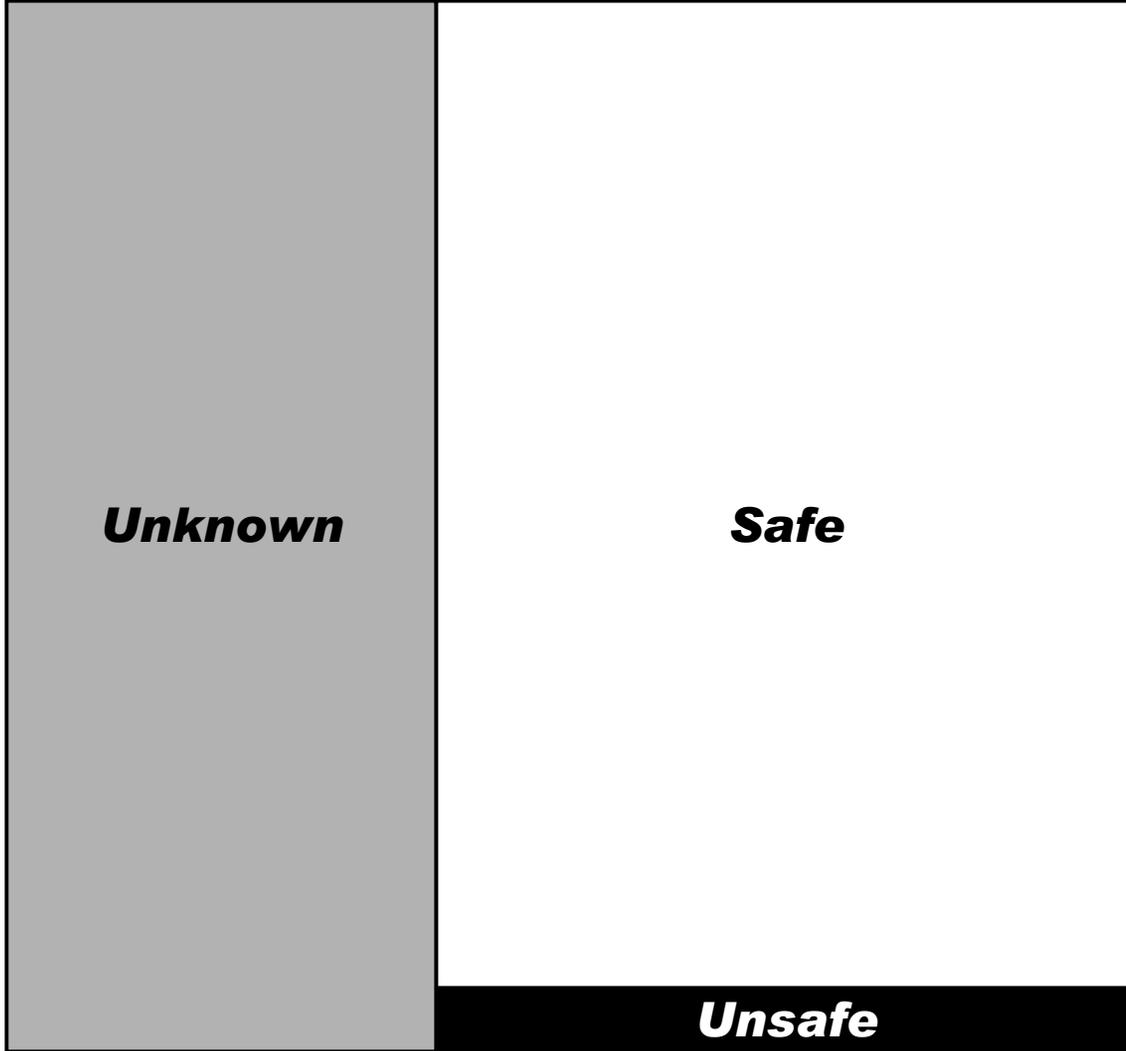

Argument is wrong

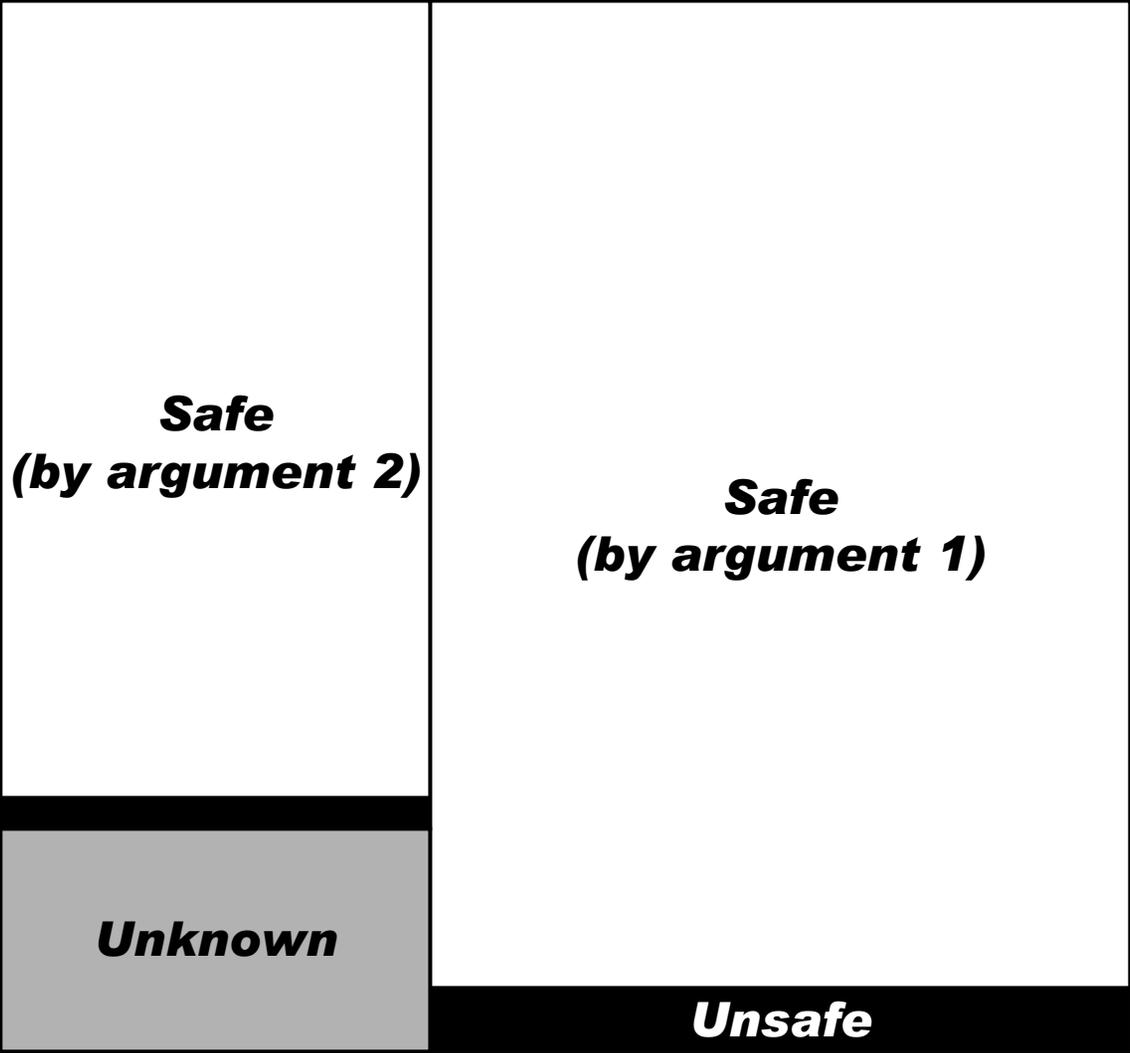

Argument is right
